Marine Zooplankton:

Ecology of Marine Zooplankton and Micronekton in Polar and Sub-Polar Areas Letterio Guglielmo, Alessandro Bergamasco, Guang Yang, Antonia Granata, 2024-11-01 The Polar and Subpolar region comprise one of the seven regions in the world from the Arctic to the Antarctic the Atlantic Pacific and Indian Oceans Marine biodiversity in the polar and subpolar regions is one of the richest on earth hosting important populations of crustaceans pelagic and benthic species that provide resources for the many seabirds and marine mammals that congregate there However these ecosystems as well as their biodiversity are vulnerable and already affected by the impacts of climate change and other threats The high climatic dynamics in those areas have already generated strong modifications to the environment with irreversible losses in biodiversity and diminished ecosystem services that are essential for the whole planet The current need to study and understand the biodiversity of the world's oceans makes polar and sub polar areas key regions for taxonomic and ecological studies

A Manual of Marine Zooplankton Ramasamy Santhanam, A. Srinivasan, 1994 [The Physiology, Ecology and Biogeochemistry of Marine Zooplankton in a Changing Arctic Ocean](#) Daniel J. Mayor, Geraint A. Tarling, Kim Last, Malin Daase, 2023-07-21 *Atlas of Marine Zooplankton Straits of Magellan* Letterio Guglielmo, Adrianna Ianora, 2012-12-06 The Antarctic represents the last of the world's still unexplored continents Since 1985 Italy has sent nine expeditions to this region making it one of the most scientifically active nations in the Antarctic Italy has built a permanent base there and has begun a systematic collection of data and samples which will contribute to our understanding of this peculiar and extremely fascinating continent Within this framework Italy has also conducted research in a sub Antarctic region of great scientific interest the Straits of Magellan This region with its characteristic oceanography and biota represents a transition point between the faunal assemblages of temperate and antarctic seas This atlas on the zooplankton is an important contribution to the study of the faunal assemblages of the region of the Straits and will hopefully be followed by others The initiative is part of a vast program launched by the Italian Ministry of Universities and Scientific and Technological Research to promote the exploration of Antarctic and sub Antarctic seas the aim of which is to preserve one of the Earth's largest and most undisturbed natural laboratories
