This comprehensive volume features all major classes of food components and contaminants along with components of current interest to the nutraceutical and functional foods industries. It is an essential reference for food scientists and chemists as well as food manufacturers and researchers interested in the many methods of food analysis. Methods of Analysis of Food Components and Additives W. H. C. Bassetti, 2005 *Food Composition and Analysis* Leonard W. Aurand, 2013-11-11 There is an increasing demand for food technologists who are not only familiar with the practical aspects of food processing and merchandising but who are also well grounded in chemistry as it relates to the food industry. Thus in the training of food technologists there is a need for a textbook that combines both lecture material and lab oratory experiments involving the major classes of foodstuffs and food additives. To meet this need this book was written. In addition the book is a reference text for those engaged in research and technical work in the various segments of the food industry. The chemistry of representative classes of foodstuffs is considered with respect to food composition effects of processing on composition, food deterioration, food preservation and food additives. Standards of identity for a number of the food products as prescribed by law are given. The food products selected from each class of foodstuffs for lab oratory experimentation are not necessarily the most important economically or the most widely used. However the experimental methods and techniques utilized are applicable to the other products of that class of foodstuff. Typical food adjuncts and additives are discussed in relation to their use in food products together with the laws regulating their usage. Laboratory experiments are given for the qualitative identification and quantitative estimation of many of these substances. *Encyclopedia of Analytical Science*, 2019-04-02 The third edition of the Encyclopedia of Analytical Science Ten Volume Set is a definitive collection of articles covering the latest technologies in application areas such as medicine, environmental science, food science and geology.
