Farquharson's Textbook of Operative General Surgery Brendan Moran, Rohin Mittal, Amy Lord, 2025-11-26 The Eleventh Edition of Farquharson's continues to provide both the fundamental surgical skills needed by junior trainee surgeons and the general surgical subspecialty knowledge necessary for higher surgical training The topics cover the whole patient with the concept that trainee surgeons need an overview and all surgeons need to occasionally operate outside of their area of expertise Although surgeons in training no longer anticipate that they will be expected to undertake unfamiliar operations without supervision disease and injury do not respect specialty organ practice especially in emergency surgery and trauma With increasing specialisation even experienced surgeons can sometimes be involved in a surgical emergency or an intraoperative complication requiring them to perform an operative procedure in a subspecialty other than their own With this in mind each of the specialist authors have focused their topic on principles for the general surgeon and the editors have consolidated and adapted the information to bridge the gap between general and specialty surgery In many parts of the world General Surgery has remained an all encompassing surgical discipline and in remote hospitals General Surgeons may be the only surgical specialists When transfer and referral options are unavailable or delayed these surgeons may have to offer a limited service in orthopaedics neurosurgery urology and obstetrics For these reasons some operations in other surgical disciplines are included and here the emphasis is more on what might be achievable in difficult circumstances rather than on a more sophisticated procedure if this would be impractical outside a specialist centre This classic concise textbook will benefit all General Surgeons whether already well established or just embarking on their career in surgery

*Endoscopic and Robotic Surgery* Har Prakash Garg, Ramesh Agarwalla, Makam Ramesh, Ajay Kumar, Kona Lakshmi, 2024-01-30 Minimally invasive surgery MIS is an approach to surgery that minimises cutting through the skin and tissues. Surgeons use MIS techniques and technology to cause as little trauma as possible during a procedure. Smaller cuts reduce the potential for pain, complications and recovery time. Laparoscopic, endoscopic and robotic procedures are all types of minimally invasive surgery. Comprising more than 1500 pages, this two volume set is a complete guide to laparoscopic, endoscopic and robotic surgical procedures. Divided into six sections, the book begins with an introduction to the types, basic principles and equipment for minimally invasive surgery. Each of the remaining sections covers operative procedures for different sections of the gastrointestinal system: oesophagus, stomach and small intestine, colon, rectum and anal canal, liver, biliary tract, pancreas and spleen. Bariatrics and metabolic surgery, and abdominal wall hernia. Each chapter provides step by step detail on a different procedure, assisted by illustrative figures and useful tables. Access to demonstrative videos illustrating surgical procedures is included with the book.

Todd Heniford, 2010-09-11 As minimal access approaches to cancer diagnosis, staging and therapy become more widely used, it is vital for general surgeons, along with laparoscopists, surgical oncologists and medical oncologists to stay up to date. The editors, a team consisting of a renowned surgical oncologist and a laparoscopic specialist, aim to provide a resource for the practicing general surgeon using basic minimally invasive techniques. The book discusses diagnosis, including biopsy with microinstrumentation, staging and palliative and curative resection. Specific tumor sites are addressed, including esophagus, stomach, spleen, small bowel, pancreato-biliary, hepatic resection and colo-rectal resection. Minimally invasive approaches to the thoracic and retroperitoneal areas are included. The book provides a thorough overview of basic cancer biology, instrumentation and ultrasound. Additionally, Greene and Heniford explore controversial issues such as port site recurrence and the effect of pneumoperitoneum on the spread of cancer cells in the abdomen. Many photographs and line drawings, including 16 in full color, illustrate the principles discussed in the text. A must have for every practicing general surgeon, laparoscopic fellow and general surgery resident.
