Minimal Rationality Christopher Cherniak boldly challenges the myth of Man the the Rational Animal and the central role that the perfectly rational agent has had in philosophy psychology and other cognitive sciences as well as in economics His book presents a more realistic theory based on the limits to rationality which can play a similar generative role in the human sciences and it seeks to determine the minimal rationality an actual agent must possess **Production System Models of**

Learning and Development David Klahr,Pat Langley,Robert Neches,1987 Cognitive psychologists have found the production systems class of computer simulation models to be one of the most direct ways to cast complex theories of human intelligence There have been many scattered studies on production systems since they were first proposed as computational models of human problem solving behavior by Allen Newell some twenty years ago but this is the first book to focus exclusively on these important models of human cognition collecting and giving many of the best examples of current research In the first chapter Robert Neches Pat Langley and David Klahr provide an overview of the fundamental issues involved in using production systems as a medium for theorizing about cognitive processes emphasizing their theoretical power The remaining chapters take up learning by doing and learning by understanding discrimination learning learning through incremental refinement learning by chunking procedural learning and learning by composition A model of cognitive development called BAIRN is described and a final chapter reviews John Anderson s ACT theory and discusses how it can be used in intelligent tutoring systems including one that teaches LISP programming skills In addition to the editors the contributors are Yuichiro Anzai Hokkaido University Japan Paul Rosenbloom Stanford and Allen Newell Carnegie Mellon Stellan Ohlsson University of Pittsburgh Clayton Lewis University of Colorado Boulder Iain Wallace and Kevin Bluff Deakon University Australia and John Anderson Carnegie Mellon David Klahr is Professor and Head of the Department of Psychology at Carnegie Mellon University Pat Langley is Associate Professor Department of Information and Computer Science University of California Irvine and Robert Neches is Research Computer Scientist at University of Southern California Information Sciences Institute Production System Models of Learning and Development is included in the series Computational Models of Cognition and Perception edited by Jerome A Feldman Patrick J Hayes and David E Rumelhart A Bradford Book **Explorations in Parallel Distributed Processing** James L. [Perspectives on Causation](#) Elitzur A. Bar-Asher Siegal, Nora Boneh, 2020-07-27 This book explores relationships and maps out intersections between discussions on causation in three scientific disciplines linguistics philosophy and psychology The book is organized in five thematic parts investigating connections between philosophical and linguistic studies of causation presenting novel methodologies for studying the representation of causation tackling central issues in syntactic and semantic representation of causal relations and introducing recent advances in philosophical thinking on causation Beyond its thematic organization readers will find several recurring topics throughout this book such as the attempt to reduce causality to other non causal terms causal pluralism vs one all encompassing account for causation causal relations pertaining to the mental as opposed to the physical realm and more This collection also lays the foundation for questioning whether it is possible to evaluate available philosophical approaches to causation against the variety of linguistic phenomena ranging across diverse lexical and grammatical items such as bound morphemes prepositions connectives and verbs Above all it lays the groundwork for considering whether the fruits of the psychological cognitive study of the perception of causal relations may contribute to linguistic and philosophical studies and whether insights from linguistics can

benefit the other two disciplines
