Women's Health Technology Dr I Pearson, 2025-02-18 This book discusses my own inventions in the field of Women's Health Technology. Notably: 1. Active Skin: A platform that integrates electronics into our skin for a wide range of women's health applications. 2. Enhanced DNA (EDNA): An API for augmented biology that allows external IT and AI to access and control numerous aspects of our internal health at a cellular level. 3. Tethered Non-Cellular Organisms (TNCOs): Cybernetic AI biology hybrids that live symbiotically inside our bodies to cure and protect against major diseases such as Alzheimer's, cancers, and heart disease, the leading causes of death among women worldwide. 4. Synthetic biome Manager: which would look after our gut biome, keeping it in good shape. 5. Parallel Immune System: that would augment our natural immune system. 5. AI Tethered Synthetic Organisms: basically a cellular equivalent to TNCOs, living symbiotically in our bodies with similar safeguards, able to address some issues better than TNCOs, others less well. The book is divided into two main parts. The first is organized according to life stages from pre-birth to end of life. The second part outlines my routine maintenance and early diagnosis technology, then delves deeper into my more powerful inventions and their potential contributions to curing our major diseases and keeping every woman in good health. That includes various cybernetic organisms that would live in our bodies in symbiosis.
