Nondifferentiable Optimization And Polynomial Problems:

Nondifferentiable Optimization and Polynomial Problems N.Z. Shor, 1998-03-31 Polynomial extremal problems PEP constitute one of the most important subclasses of nonlinear programming models Their distinctive feature is that an objective function and constraints can be expressed by polynomial functions in one or several variables Let $e \in \mathbb{R}^n$ be the vector in n dimensional real linear space \mathbb{R}^n $P_0 \in \mathcal{P}_1 \subset \mathcal{P}_m$ are polynomial functions in \mathbb{R} with real coefficients In general a PEP can be formulated in the following form $0 \leq f(x) \leq 1$ find $x \in \mathbb{R}^n$ subject to constraints $0 \leq P_i(x) \leq 1$ $i = 1, \dots, m$ a constraint in the form of inequality can be written in the form of equality by introducing a new variable for example $P(x) \leq 0$ is equivalent to $P(x) + y^2 = 0$ Boolean and mixed polynomial problems can be written in usual form by adding for each boolean variable z the equality $z^2 = z$ $0 \leq z \leq 1$ Let $a = (a_1, \dots, a_n)$ be integer vector with nonnegative entries $a_i \in \mathbb{N}$ Denote by R_a a monomial in n variables of the form $R_a = x_1^{a_1} \dots x_n^{a_n}$ $d_a = \sum_{i=1}^n a_i$ is the total degree of monomial R_a Each polynomial in n variables can be written as sum of monomials with nonzero coefficients $P \in \mathcal{P}_n$ \mathcal{P}_n is the set of monomials contained in polynomial P

Emerging Applications of Algebraic Geometry Mihai Putinar, Seth Sullivant, 2008-12-10 Recent advances in both the theory and implementation of computational algebraic geometry have led to new striking applications to a variety of fields of research The articles in this volume highlight a range of these applications and provide introductory material for topics covered in the IMA workshops on Optimization and Control and Applications in Biology Dynamics and Statistics held during the IMA year on Applications of Algebraic Geometry The articles related to optimization and control focus on burgeoning use of semidefinite programming and moment matrix techniques in computational real algebraic geometry The new direction towards a systematic study of non commutative real algebraic geometry is well represented in the volume Other articles provide an overview of the way computational algebra is useful for analysis of contingency tables reconstruction of phylogenetic trees and in systems biology The contributions collected in this volume are accessible to non experts self contained and informative they quickly move towards cutting edge research in these areas and provide a wealth of open problems for future research

Positive Polynomials in Control Didier Henrion, Andrea Garulli, 2005-01-14 Positive Polynomials in Control originates from an invited session presented at the IEEE CDC 2003 and gives a comprehensive overview of existing results in this quickly emerging area. This carefully edited book collects important contributions from several fields of control optimization and mathematics in order to show different views and approaches of polynomial positivity. The book is organized in three parts reflecting the current trends in the area: 1 applications of positive polynomials and LMI optimization to solve various control problems; 2 a mathematical overview of different algebraic techniques used to cope with polynomial positivity; 3 numerical aspects of positivity of polynomials and recently developed software tools which can be employed to solve the problems discussed in the book. Homogeneous Polynomial Forms for Robustness Analysis of Uncertain Systems Graziano Chesi, Andrea Garulli, Alberto Tesi, Antonio Vicino, 2009-07-13 This book presents a number of techniques for robustness analysis of uncertain systems. In it, convex relaxations for several robustness problems are derived by exploiting and providing new results on the theory of homogeneous polynomial forms. **Big Data Management** Fausto Pedro García Márquez, Benjamin Lev, 2016-11-15 This book focuses on the analytic principles of business practice and big data. Specifically, it provides an interface between the main disciplines of engineering technology and the organizational and administrative aspects of management, serving as a complement to books in other disciplines such as economics, finance, marketing, and risk analysis. The contributors present their areas of expertise together with essential case studies that illustrate the successful application of engineering management theories in real life examples. Constructing and Applying Objective Functions Andranik S. Tangian, Josef Gruber, 2012-12-06 For some seven decades, econometrics has been almost exclusively dealing with constructing and applying econometric equation systems which constitute constraints in econometric optimization models. The second major component, the scalar-valued objective function, has only in recent years attracted more attention and some progress has been made. This book is devoted to theories, models, and methods for constructing scalar-valued objective functions for econometric optimization models to their applications and to some related topics like historical issues about pioneering contributions by Ragnar Frisch and Jan Tinbergen. From Convexity to Nonconvexity R.P. Gilbert, Panagiotis D. Panagiotopoulos, Panos M. Pardalos, 2001-09-30 The book contains a collection of invited papers dedicated to the memory of two great mathematicians, Gaetano Fichera and Panagiotopoulos. The theme of the collection is centered around the seminal research of G. Fichera on the Signorini problem, hemivariational inequalities, pioneered by Panagiotopoulos, nonsmooth global optimization, and regularity results for variational inequalities. Audience: The book is addressed to faculty, graduate students, and researchers in mathematical programming and engineering. Neumann, Christoph Schwindt, Jgen Zimmermann, 2002 The book presents the state of the art of deterministic resource constrained project scheduling with time windows General temporal constraints arising from minimum and maximum time lags between project activities and several different types of limited resources are considered A large variety of time based financial and resource based objectives important in practice are studied A thorough structural analysis of the feasible region of project scheduling problems and a classification and detailed investigation of objective functions are performed which can be exploited for developing efficient exact and heuristic solution methods New interesting applications of project scheduling to production and operations management as well as investment projects are discussed in the second edition **RAIRO.**
