*Reports (1-4 double-spaced typewritten pages) should describe tools, products, and/or services found useful by practicing evaluators. Reports should also include the context of use and sufficient information for interested readers to contact the user directly for more detailed information, that is, name, address, and telephone number. Books, computer software and hardware, and new techniques — or old ones used in new ways — are just a few of the items that may be described.*

### Nonlinear Multivariate Analysis

JAN DE LEEUW

[Editors' note: Dr. de Leeuw was invited to provide a short overview of the methodology that he and his colleagues have developed for analyzing large-scale data bases.]

In evaluation research and survey analysis, multivariate analysis procedures applied to large data sets are very important. In the physical and biological sciences we are often interested in relating a very small number of variables, with relatively low measurement errors, using specific models based on explicit prior knowledge about the functional form of the relationship. This makes it possible to fit models to small amounts of data and still find stable relationships. If we do not have prior knowledge and if the level of measurement error is high, we have to increase the amounts of data by taking larger samples and/or by analyzing more variables. Increasing the number of observations decreases the sampling errors and increasing the number of variables hopefully decreases the measurement errors.

There are two basic problems with applying standard multivariate analysis techniques to large surveys or panel studies. In the first place, the amount of computation involved can be prohibitive, at least with the resources that are often available. Not everybody has access to a Cray supercomputer — sometimes a PC or a Mac is all that is available. However, this problem is admittedly less important than it used to be. The second problem is that the assumptions needed to interpret classical multivariate analysis techniques are usually quite inappropriate. Often the techniques are designed for numerical variables, usually linearity of regression is required, and for

Coppi,Sergio Bolasco,1989 This book collects together 45 papers covering various aspects of the analysis of multiway data arrays Mathematical properties of three way and multiway arrays are investigated and their utilization for the statistical interpretation of complex data sets is emphasized The volume is divided into 5 chapters A specific introduction to each chapter has been prepared by the Editorial Board Different methods of analysis are considered including longitudinal and multimode factor analysis generalized canonical analysis multidimensional scaling multiway classification techniques model based approaches The reader can find many original contributions to this area as well as interesting applications in several fields of research such as psychology economics sociology and bio medicine

Computer-aided Multivariate Analysis Abdelmonem A. Afifi,Virginia Clark,1984 Increasingly researchers need to perform multivariate statistical analyses on their data Unfortunately a lack of mathematical training prevents many from taking advantage of these advanced techniques in part because books focus on the theory neglect to explain how to perform interpret multivariate analyses on real life data For years Afifi Clark s Computer Aided Multivariate Analysis has been a welcome exception helping researchers choose the appropriate analyses for their data carry them out interpret the results Only a limited knowledge of statistics is assumed geometrical graphical explanations are used to explain what the analyses do However the basic model is always given assumptions are discussed Reflecting the increased emphasis on computers the Third Edition includes three additional statistical packages written for the personal computer The authors also discuss data entry database management data screening data transformations as well as multivariate data analysis Another new chapter focuses on log linear analysis of multi way frequency tables Students in a wide range of fields ranging from psychology sociology physical sciences to public health biomedical science will find Computer Aided Multivariate Analysis especially informative enlightening
