Nonlinear Models For Medical Statistics:

Nonlinear Models in Medical Statistics James K. Lindsey, 2001 This text provides an introduction to the use of nonlinear models in medical statistics It is a practical text rather than a theoretical one and assumes a basic knowledge in statistical modelling and of generalized linear models The book first provides a general introduction to nonlinear models comparing them to generalized linear models It describes data handling and formula definition and summarises the principal types of nonlinear regression formulae there is an emphasis on techniques for non normal data Following chapters provide detailed examples of applications in various areas of medicine epidemiology clinical trials quality of life pharmacokinetics pharmacodynamics assays and formulations and molecular genetics The book concludes with appendices describing data handling and model formulae in more detail and given ways of modelling dependencies in repeated measurements and data for the exercises

Essential Statistical Methods for Medical Statistics J. Philip Miller, 2010-11-08 Essential Statistical Methods for Medical Statistics presents only key contributions which have been selected from the volume in the Handbook of Statistics Medical Statistics Volume 27 2009 While the use of statistics in these fields has a long and rich history the explosive growth of science in general and of clinical and epidemiological sciences in particular has led to the development of new methods and innovative adaptations of standard methods This volume is appropriately focused for individuals working in these fields Contributors are internationally renowned experts in their respective areas Contributors are internationally renowned experts in their respective areas Addresses emerging statistical challenges in epidemiological biomedical and pharmaceutical research Methods for assessing Biomarkers analysis of competing risks Clinical trials including sequential and group sequential crossover designs cluster randomized and adaptive designs Structural equations modelling and longitudinal data analysis

Epidemiology and Medical Statistics, 2007-11-21 This volume representing a compilation of authoritative reviews on a multitude of uses of statistics in epidemiology and medical statistics written by internationally renowned experts is addressed to statisticians working in biomedical and epidemiological fields who use statistical and quantitative methods in their work While the use of statistics in these fields has a long and rich history explosive growth of science in general and clinical and epidemiological sciences in particular have gone through a sea of change spawning the development of new methods and innovative adaptations of standard methods Since the literature is highly scattered the Editors have undertaken this humble exercise to document a representative collection of topics of broad interest to diverse users The volume spans a cross section of standard topics oriented toward users in the current evolving field as well as special topics in much need which have more recent origins This volume was prepared especially keeping the applied statisticians in mind emphasizing applications oriented methods and techniques including references to appropriate software when relevant Contributors are internationally renowned experts in their respective areas Addresses emerging statistical challenges in epidemiological biomedical and pharmaceutical research Methods for assessing Biomarkers analysis of
