Nonlinear Problems In Random Theory 1st Edition:

    <u>Nonlinear Problems in Random Theory</u> Norbert Wiener,2013-03   **Class Field Theory** Georges Gras,2013-11-11 Global class field theory is a major achievement of algebraic number theory based on the functorial properties of the reciprocity map and the existence theorem This book explores the consequences and the practical use of these results in detailed studies and illustrations of classical subjects In the corrected second printing 2005 the author improves many details all through the book   *Serre's Problem on Projective Modules* T.Y. Lam,2006-05-05 An invaluable summary of research work done in the period from 1978 to the present   **On Thom Spectra, Orientability, and Cobordism** Yuli B. Rudyak,1998-04-16 Rudyak s groundbreaking monograph is the first guide on the subject of cobordism since Stong s influential notes of a generation ago It concentrates on Thom spaces spectra orientability theory and co bordism theory including co bordism with singularities and in particular Morava K theories These are all framed by co homology theories and spectra The author has also performed a service to the history of science in this book giving detailed attributions   *Galois Theory of p-Extensions* Helmut Koch,2013-03-09 First published in German in 1970 and translated into Russian in 1973 this classic now becomes available in English After introducing the theory of pro p groups and their cohomology it discusses presentations of the Galois groups G S of maximal p extensions of number fields that are unramified outside a given set S of primes It computes generators and relations as well as the cohomological dimension of some G S and gives applications to infinite class field towers The book demonstrates that the cohomology of groups is very useful for studying Galois theory of number fields at the same time it offers a down to earth introduction to the cohomological method In a Postscript Helmut Koch and Franz Lemmermeyer give a survey on the development of the field in the last 30 years Also a list of additional recent references has been included   *Blocks of Finite Groups* Luis Puig,2002-06-13 About 60 years ago R Brauer introduced block theory his purpose was to study the group algebra kG of a finite group G over a field k of nonzero characteristic p any indecomposable two sided ideal that also is a direct summand of kG determines a G block But the main discovery of Brauer is perhaps the existence of families of infinitely many nonisomorphic groups having a common block i e blocks having mutually isomorphic source algebras In this book based on a course given by the author at Wuhan University in 1999 all the concepts mentioned are introduced and all the proofs are developed completely Its main purpose is the proof of the existence and the uniqueness of the hyperfocal subalgebra in the source algebra This result seems fundamental in block theory for instance the structure of the source algebra of a nilpotent block an important fact in block theory can be obtained as a corollary The exceptional layout of this bilingual edition featuring 2 columns per page one English one Chinese sharing the displayed mathematical formulas is the joint achievement of the author and A Arabia   *Nonlinear Problems in Random Theory* Norbert Wiener (Mathematiker, Kybernetiker),1958   *Mathematical Geodesy* Bruno Brosowski,1975   **AB Bookman's Weekly** ,1987-09   <u>The National union catalog, 1968-1972</u> ,1973   <u>Catalog of Copyright Entries. Third</u>

Series Library of Congress. Copyright Office,1959 Includes Part 1 Number 2 Books and Pamphlets Including Serials and Contributions to Periodicals July December   *Union Catalog of Foreign Books Acquired by 49 Libraries in Japan* Kokuritsu Kokkai Toshokan (Japan),1959   **Proceedings of the IFAC World Congress** International Federation of Automatic Control,1964   □□□□□□□ ,1959   SIAM Journal on Applied Mathematics Society for Industrial and Applied Mathematics,1966 Contains research articles on mathematical methods and their applications in the physical engineering biological and medical sciences   *Applications and Research in Information Systems and Sciences* Demetrios G.
