

## Nonwoven Materials - Creating A Crucial Place In Automotive Industry

There is no doubt that the use of nonwovens has greatly increased in recent years. As per the experts, more than 35 automotive parts are created using nonwoven fabric. Such textiles are made using long fibers combined together by solvent, heat, mechanical, and chemical treatment. Even though nonwoven fibers are weaker compared to woven material, they can be easily densified and toughened by backing.

They can lower the car weight, offer better insulation and increase the aesthetics as well as comfort. Besides, different studies have proved that nonwoven textiles are soft, washable, fire retardancy, resistant to fuels, extreme temperatures and more. By combining with other materials, you can change the properties of nonwovens based on your requirements.

In combination with other materials, they provide a variety of products with different properties. Therefore, there are several applications for nonwoven textiles, such as automotive textiles, home textiles, sports textiles, geotextiles etc.

### Use of Nonwoven in the Global Automotive Industry

With time, needled, spun-bonded, composite and spun-laced **nonwoven materials** are getting popular in the automotive industry, and they can be used for different parts. You
