Using Workbooks in Mental Health Luciano L'Abate, 2014-01-14 The use of workbooks in therapy might represent one of the biggest breakthroughs that has occurred in decades Using Workbooks in Mental Health Resources in Prevention Psychotherapy and Rehabilitation for Clinicians and Researchers examines the effectiveness of mental health workbooks designed to address problems ranging from dementia and depression to addiction spousal abuse eating disorders and more Compiled by Dr Luciano L Abate a leading authority on mental health workbooks this resource will help clinicians and researchers become aware of the supportive evidence for the use of workbooks Using Workbooks in Mental Health examines workbooks designed to specifically help clients affected by dementia or depression abused women gambling addicts women who have substance abuse addictions incarcerated felons couples preparing for marriage children with school refusal disorder and more An essential reference for mental health professionals graduate students administrators and researchers Using Workbooks in Mental Health also explores the role of workbooks in psychological intervention over the past decade Although workbooks are not yet part of the mainstream of psychological intervention they are growing in popularity as their many advantages are recognized They are easy to use by almost any client they are cost effective to both therapist and client in terms of money and time they provide therapists with written assignments to use as homework for individuals couples and families and they can be used in any setting especially in computer assisted offline or online interventions In addition this book shows how workbooks can be used to administer therapy to previously unreachable clients such as people who are reluctant to talk to an authoritative figure or a stranger people who cannot afford face to face treatments incarcerated offenders who have not been helped by talk therapies Internet users who are searching for help via computer rather than in person

reason is fear and stigma A thorough assessment by a specialist is considered best practice After all what if we miss signs of suicide or potential harm to others A reasonable question on the surface however the premise is flawed First the risk of suicide or threat to others for those already seeking care is low Second our technical capacity to predict on these threats is virtually nil Finally assessment in our current culture of fear tends to focus more on the identification of deficits as opposed to functional capacities leading to over prescription of expensive remedies and lost opportunities for autonomy and self management Despite little evidence linking assessment to treatment outcomes and no evidence supporting our capacity to detect risk for harm we persist with lengthy intake assessments and automatic specialist referrals that delay care Before providers and policy makers can feel comfortable letting go of risk assessment however they need to understand the forces underlying the risk paradigm that dominates our society and restricts creative solutions for supporting those in need
