Machine At Work Technology Work And Organization:

The Machine at Work Keith Grint, Steve Woolgar, 2013-06-28 This highly topical book is a concise and accessible account of the relationship between technology and work Firstly it reviews and critically assesses a variety of recent approaches to the social and cultural dimensions of technology Secondly it examines the implications of these new approaches for existing ideas about the nature of technology and work organization At the core of much thinking about technology is the assumption that the technical character and capacity of artefacts is given The enduring image of deus ex machina captures the idea that it is the essential capacity within a technology which in the end accounts for the way we organize ourselves our work and other life experiences Recent work in the sociology of technology by contrast sets out relativist and constructivist accounts of technology which begin to challenge this central assumption The Machine at Work includes a reinterpretation of the Luddites a review of the social processes of development in information technology a reassessment of theories of the role of technology in work and an analysis of the common limitations of some constructivist and feminist perspectives on technology The book argues that only a commitment to a particular conception of constructivism enables the kind of radical rethinking about technology and work relations that is needed This engaging and informative text will be of interest to students in a range of subject areas from sociology organizational theory and behaviour to industrial relations management and business studies

Interdisciplinary Approaches to the Structure and Performance of Interdependent Autonomous Human Machine Teams and Systems (A-HMT-S) William Frere Lawless, Donald Sofge, Daniel M. Lofaro, 2023-03-30

Designing Technology, Work, Organizations and Vice Versa Enrico Attila Bruni, Laura Lucia Parolin, Cornelius Schubert, 2015-09-01

The concept of design has been defined in a multitude of ways and used in a variety of academic fields ranging from the classics of organizational and system design to studies on corporate culture aesthetics and consumption. However, in mainstream organization and management studies, the concept of design has been black boxed and easily implied as an updated and more fashionable version of the traditional idea of structuring organizational processes. At the same time, working and organizing seem to be embedded nowadays in increasingly complex and situated technologies and practices. If the spreading of information and communication technologies (ICTs) has changed workplaces and even the very meaning of workplace as an area marked by the physical presence of different human actors working and organizing mobilizes the joint action of humans, technologies, and knowledges, the aim of the book is thus to discuss the relations among technologies, work, and organisations from multiple theoretical perspectives and to engage with questions about design as well as the sociomaterial foundations of working and organising. The book focuses on the close study of practices and processes that inextricably link work and organisation to the use of artefacts and technological systems and vice versa, exploring by means of different cases of organizational and design research articulations and disarticulations of daily work and design: the doing of objects and technologies in everyday organizational life; the reconstruction of organizational processes through technological and design practices; the relation between learning innovations and technologies in organizational settings. The book is addressed to graduate students, PhDs, scholars, and researchers interested in the fields of Organization Studies, Science and Technology Studies, Sociology, and Design, as well as to professionals and practitioners interested in new methodological approaches towards the relations between technology, work, and organization.

Sociology of Work Vicki Smith, 2013-05-16

The simple act of going to work every day is an integral part of all societies across the globe. It is an ingrained social contract we all work to survive. But it goes beyond physical survival. Psychologists have equated losing a job with the trauma of divorce or a family death, and enormous issues arise from financial panic to sinking self-esteem. Through work, we build our self-identity, our lifestyle, and our aspirations. How did it come about that work dominates so many parts of our lives and our psyche? This multi-disciplinary encyclopedia covers curricular subjects that seek to address that question, ranging from business and management to anthropology, sociology, social history, psychology, politics, economics, and health. Features: Benefits International and comparative coverage; 335 signed entries A to Z fill 2 volumes in print and electronic formats; Cross References and Suggestions for Further Readings guide readers to additional resources; A Chronology provides students with historical perspective of the sociology of work.
