Machine translation for everyone: Empowering users in the age of artificial intelligence Dorothy Kenny , 2022-07-06 Language learning and translation have always been complementary pillars of multilingualism in the European Union Both have been affected by the increasing availability of machine translation MT language learners now make use of free online MT to help them both understand and produce texts in a second language but there are fears that uninformed use of the technology could undermine effective language learning At the same time MT is promoted as a technology that will change the face of professional translation but the technical opacity of contemporary approaches and the legal and ethical issues they raise can make the participation of human translators in contemporary MT workflows particularly complicated Against this background this book attempts to promote teaching and learning about MT among a broad range of readers including language learners language teachers trainee translators translation teachers and professional translators It presents a rationale for learning about MT and provides both a basic introduction to contemporary

machine learning based MT and a more advanced discussion of neural MT It explores the ethical issues that increased use of MT raises and provides advice on its application in language learning It also shows how users can make the most of MT through pre editing post editing and customization of the technology

The Human Factor in Machine Translation

Sin-wai Chan,2018-05-08 Machine translation has become increasingly popular especially with the introduction of neural machine translation in major online translation systems However despite the rapid advances in machine translation the role of a human translator remains crucial As illustrated by the chapters in this book man machine interaction is essential in machine translation localisation terminology management and crowdsourcing translation In fact the importance of a human translator before during and after machine processing cannot be overemphasised as human intervention is the best way to ensure the translation quality of machine translation This volume explores the role of a human translator in machine translation from various perspectives affording a comprehensive look at this topical research area This book is essential reading for anyone involved in translation studies machine translation or interested in translation technology

Post-editing of Machine Translation Laura Winther Balling,Michael Carl,Sharon O'Brian,2014-03-17 Post editing is possibly the oldest form of human machine cooperation for translation It has been a common practice for just about as long as operational machine translation systems have existed Recently however there has been a surge of interest in post editing among the wider user community partly due to the increasing quality of machine translation output but also to the availability of free reliable software for both machine translation and post editing As a result the practices and processes of the translation industry are changing in fundamental ways This volume is a compilation of work by researchers developers and practitioners of post editing presented at two recent events on post editing The first Workshop on Post editing Technology and Practice held in conjunction with the 10th Conference of the Association for Machine Translation in the Americas held in San Diego in 2012 and the International Workshop on Expertise in Translation and Post editing Research and Application held at the Copenhagen Business School in 2012

Machine Translation Yorick Wilks,2008-10-30 Machine Translation MT is both an engineering technology and a measure of all things to do with languages and computers whenever a new theory of language or linguistics is offered an important criteria for its success is whether or not it will improve machine translation This book presents a history of machine translation MT from the point of view of a major writer and innovator in the subject It describes and contrasts a range of approaches to the challenges and problems of this remarkable technology by means of a combination of historic papers along

with commentaries to update their significance both at the time of their writing and now This volume chronicles the evolution of conflicting approaches to MT towards a somewhat skeptical consensus on future progress Also included is a discussion of the most recent developments in the field and prospects for the future which have been much changed by the arrival of the World Wide Web [On Machine Translation](#) Paul L. Machine Translation John Lehrberger, Laurent Bourbeau, 1988-01-01 The use of the computer in translating natural languages ranges from that of a translator's aid for word processing and dictionary lookup to that of a full fledged translator on its own However the obstacles to translating by means of the computer are primarily linguistic To overcome them it is necessary to resolve the ambiguities that pervade a natural language when words and sentences are viewed in isolation The problem then is to formalize in the computer these aspects of natural language understanding The authors show how from a linguistic point of view one may form some idea of what goes on inside a system's black box given only the input original text and the raw output translated text before post editing Many examples of English French translation are used to illustrate the principles involved

Machine Translation Thierry Poibeau, 2017-09-29 A concise nontechnical overview of the development of machine translation including the different approaches evaluation issues and major players in the industry The dream of a universal translation device goes back many decades long before Douglas Adams's fictional Babel fish provided this service in *The Hitchhiker's Guide to the Galaxy* Since the advent of computers research has focused on the design of digital machine translation tools computer programs capable of automatically translating a text from a source language to a target language This has become one of the most fundamental tasks of artificial intelligence This volume in the MIT Press Essential Knowledge series offers a concise nontechnical overview of the development of machine translation including the different approaches evaluation issues and market potential The main approaches are presented from a largely historical perspective and in an intuitive manner allowing the reader to understand the main principles without knowing the mathematical details The book begins by discussing problems that must be solved during the development of a machine translation system and offering a brief overview of the evolution of the field It then takes up the history of machine translation in more detail describing its pre digital beginnings rule based approaches the 1966 ALPAC Automatic Language Processing Advisory Committee report and its consequences the advent of parallel corpora the example based paradigm the statistical paradigm the segment based approach the introduction of more linguistic knowledge into the systems and the latest approaches based on deep learning Finally it considers evaluation challenges and the commercial status of the field including activities by such major players as Google and Systran

will display history of MT and will deal with some of the major issues in the realisation of MT like the difficulty of translating prepositions or integrating semantics as well as the importance of real world knowledge To illustrate these difficulties with examples on a basic level a practice test with a moderately complex translation engine provided by Google has been carried out and will be explained Finally I am going to introduce three of the largest and most powerful translation machines currently in use I will also give a brief over view of methods of MT The aim of this paper is to show that the realisation of the primal idea of machine translation in its original sense which was to perform translation without human intervention except during the construction phase of the system is still markedly far away at present and machines are still unlikely to take over the jobs of human translators
