1 The Last Invention The Impact Of Advanced Ai

Francisco Jerbesson De Freitas Morais,2025-12-19 The Last Invention The Impact of Advanced Artificial Intelligence

Humanity has always moved forward by creating tools. But for the first time it has created something capable of thinking learning and deciding. In 'The Last Invention' readers are taken on a deep, clear and forward-looking exploration of the rise of advanced artificial intelligence and its irreversible consequences for civilization. The book examines how AI has evolved from a simple technological tool into a global cognitive infrastructure, transforming education, labor, economics, governments, art, science and even the human mind itself. With accessible language and strong technical rigor, the work explores the historical evolution of artificial intelligence, how neural networks and large language models truly function, the rise of multimodal generative AI, the direct impact of AI on the global economy, professions and geopolitical power, and the ethical, social and human limits of this transformation. Moving beyond both technological hype and dystopian fear, the book presents a central argument: the greatest risk of AI is not the machine itself, but how humanity chooses to use it. By addressing themes such as expanded cognition, digital exclusion, inclusive interfaces, augmented humans and mental sovereignty, the book reveals that AI can become either the greatest instrument of inclusion ever created or the most sophisticated mechanism of inequality in human history.

Advanced Information Processing Techniques for LAN and MAN Management Jean Pierre Claudé, 1994

Although networks are widespread today, their management remains difficult because of the complex heterogeneity of the environment. LAN, MAN, multi manufacturer, multi media, multi domain. A variety of computational techniques are required and different points of view must be taken into account to achieve a complete network management system. Firstly, management information must be extracted from network components and manipulated by the integrator proxy agent. Secondly, management data must be maintained in the Management Information Base and distributed to the various management applications. Thirdly, management applications must be provided for diverse objectives including the functional, objective, performance, configuration, accounting, fault, security, the responsibility, objective, network element, network services, business management, the organizational objective, server resources management and the domain objective, public, private. A variety of tools, expert systems, blackboard, man-machine interface must be designed to optimize the system responses. Fourthly, these points of view must be integrated in a global and distributed environment. This publication examines the benefits of advanced information processing techniques for different local network management problems and considers the current academic and industrial research being carried out. It provides a good overview of the area for specialists, students and the network using public and aims to stimulate further progress in the designing of local network management.
