Optics in Biomedical Sciences G.v. Bally,P. Greguss,2013-06-05 As there recently has been increased interest in the applications of optical techniques in biomedical research and clinical diagnostics it seemed to be appropriate to organize a comprehensive international conference on optics in medicine and biology Such a broad international meeting had not been held before An international conference on Optics in Biomedical Sciences was organized and took place in Graz Austria September 7th through 11th 1981 sponsored by the International Commission for Optics ICO in co operation with the European Optical Committee the Austrian Association on Biomedical Engineering and the German Society for Applied Optics It seemed timely to establish a forum for communication among specialists on an international level This book presenting the papers given at this conference demonstrates the state of the art of this increasingly expanding field of applications of optics Furthermore the interested reader will find an extended list of references in the various contributions This book helps to overcome the difficulty inherent in all interdisciplinary research fields of gathering widely scattered literature The contributions to this book are focussed on the following topics Biomedical applications of unconventional imaging in microscopy image processing interferometry and holography speckle techniques and spectroscopy optometry and Moire methods In addition the brilliant and humorous closing remarks of Nils Abramson from the Royal Institute of Technology Stockholm have been included *Optics in Biomedical Sciences* Gert Bally,Pál Greguss,1982 [Optics in biomedical sciences](#) G. von Bally,Pál Greguss, [Handbook of Photonics for Biomedical Science](#) Valery V. Hooper,2006-12-13 Many universities now offer a course in biomedical optics but lack a textbook specifically addressing the topic Intended to fill this gap An Introduction to Biomedical Optics is the first comprehensive introductory text describing both diagnostic and therapeutic optical methods in medicine It provides the fundamental background needed for graduate students in biomedical and electrical engineering physics biology and medicine to learn about several biomedical optics issues The textbook is divided into three main sections general optics theory therapeutic applications of light and diagnostic optical methods Each chapter has different levels of detail to build students knowledge from one level to the next The first section covers the history of optics theory and the basic science behind light tissue interactions It also introduces the relevant approaches and approximations used to describe light propagation in turbid biological media In the second section the authors look more closely at light tissue interactions and their applications in different medical areas such as wound healing and tissue welding The final section examines the various diagnostic methods that are employed using optical techniques Throughout the text the authors employ numerical examples of clinical and research requirements Fulfilling the need for a concise biomedical optics textbook An Introduction to Biomedical Optics addresses the theory and applications of this growing field *Multiphoton Microscopy in the Biomedical Sciences XV* Karsten König,2015-03 Proceedings of SPIE present the original research papers presented at SPIE conferences and other high quality conferences in the broad ranging fields of optics and photonics These books provide prompt access to the latest innovations in research and technology in their respective fields Proceedings of SPIE are among the most cited references in patent literature Who's who in Technology Today: The expertise index to Who's who in technology today ,1984

Birefringence and Bragg grating control in femtosecond laser written optical circuits ,2012-12-31 In this thesis femtosecond lasers are explored for the fabrication of fiber Bragg gratings FBGs in suspended core fibers SCFs as well as direct writing of integrated optical devices in bulk fused silica glass The FBGs fabricated in suspended core fibers with different core geometries were demonstrated with femtosecond laser exposure through a Talbot interferometer In this case the use of a femtosecond laser system was crucial as it eliminates the need for the use of photosensitive fibers which is the case for SCFs while the Talbot interferometry setup provided flexibility in the definition of the grating periodicity while

simultaneously protecting the optical components used in the fabrication process from the high intensities reached during exposure in the proximity of the fibers. These Bragg gratings were employed to show simultaneous strain and temperature sensing. Using a femtosecond laser direct writing system, novel point by point fabrication arrangements with detailed attention to the computer controlled laser beam modulation were developed in order to correctly introduce modulation of the refractive index profile during the waveguide fabrication process. This technique enabled the development of phase and frequency control required for advanced Bragg grating waveguide (BGW) fabrication and arbitrary spectral shaping. Procedures were demonstrated for the fabrication of chirped and phased shifted BGWs for applications in temporal pulse shaping and spectral shaping that showed significantly improved feature resolutions for sensing applications. The BGWs were used as a practical sensitive tool to determine and study the waveguide birefringence inherent to the nonlinear absorption processes typical of femtosecond laser material interaction. The control of form and stress birefringence was developed in order to accomplish the fabrication of integrated optical components for polarization control like guided wave retarders and polarization beam splitters. Tuning of this waveguide birefringence was achieved by the introduction of stress inducing laser modification tracks that enabled the ability to both enhance or reduce the inherent birefringence. Characterization techniques were developed for the absolute determination of the birefringence based on BGWs spectrum splitting together with crossed polarizer measurements while novel data analysis procedures were demonstrated for the study of polarization dependent and polarization independent directional couplers with the introduction of a polarization splitting ratio which is wavelength and coupling length dependent. All of the improvements made in the understanding of waveguide birefringence control provided increased flexibility to simultaneously fabricate low polarization mode dispersion circuits as well as more efficient and compact polarization dependent devices. The polarization aspects detailed here together with the point by point fabrication system may be further developed in the future towards the fabrication of more complex integrated devices that combine spectral temporal and polarization control all achievable with the same femtosecond laser writing system. These flexible processing techniques will open new directions for writing additional functionalities in optical circuits with more compact three dimensional geometries.
