**Metaheuristics for Production**

**Scheduling** Bassem Jarbouï, Patrick Siarry, Jacques Teghem, 2013-06-12 This book describes the potentialities of metaheuristics for solving production scheduling problems and the relationship between these two fields For the past several years there has been an increasing interest in using metaheuristic methods to solve scheduling problems The main reasons for this are that such problems are generally hard to solve to optimality as well as the fact that metaheuristics provide very good solutions in a reasonable time The first part of the book presents eight applications of metaheuristics for solving various mono objective scheduling problems The second part is itself split into two the first section being devoted to five multi

objective problems to which metaheuristics are adapted while the second tackles various transportation problems related to the organization of production systems Many real world applications are presented by the authors making this an invaluable resource for researchers and students in engineering economics mathematics and computer science     *Advanced Intelligent Systems for Sustainable Development (AI2SD'2019)* Mostafa Ezziyyani, 2020-03-03 This book gathers papers from the International Conference on Advanced Intelligent Systems for Sustainable Development AI2SD 2019 held on July 08 11 2019 in Marrakech Morocco which address the environment industry and economy and the role of advanced intelligent systems and computing in connection with these three fields The book includes a host of interesting studies and successful applications regarding the economy and industry e g in Manufacturing Digital Factories Smart Supply Chain Management in Industry Project Management in Industry Digital Economy Digital Business M commerce Blockchain and Digital Currencies In addition the book highlights work that addresses the environmental aspect covering topics such as Big Data Analysis the Internet of Things for Environmental Management Sensor Networks for Environmental Services Network Interoperability in Environmental Ecosystems Wireless Sensors and Cognitive Radio Networks Environmental Management Computing Systems Sustainable Mobility Solutions Remote Sensing Applications Geo information Geophysics Addressing social legislative and environmental aspects the book is intended for all stakeholders in the industrial world It will be of interest e g to customers helping them improve their profits and economic profitability and to professionals and fishermen working to evolve and optimize their supply chains and to improve productivity in the fiercely competitive I4 0 world The authors of each chapter report on the state of the art and present the outcomes of their own research laboratory experiments and successful applications The purpose of the book is to combine the idea of advanced intelligent systems with appropriate tools and techniques for modeling management and decision support in the fields of the environment industry and economy     Ant Colony Optimization Avi Ostfeld, 2011-02-04 Ants communicate information by leaving pheromone tracks A moving ant leaves in varying quantities some pheromone on the ground to mark its way While an isolated ant moves essentially at random an ant encountering a previously laid trail is able to detect it and decide with high probability to follow it thus reinforcing the track with its own pheromone The collective behavior that emerges is thus a positive feedback where the more the ants following a track the more attractive that track becomes for being followed thus the probability with which an ant chooses a path increases with the number of ants that previously chose the same path This elementary ant s behavior inspired the development of ant colony optimization by Marco Dorigo in 1992 constructing a meta heuristic stochastic combinatorial computational methodology belonging to a family of related meta heuristic methods such as simulated annealing Tabu search and genetic algorithms This book covers in twenty chapters state of the art methods and applications of utilizing ant colony optimization algorithms New methods and theory such as multi colony ant algorithm based upon a new pheromone arithmetic crossover and a repulsive operator new findings on ant colony convergence and a diversity of engineering and

science applications from transportation water resources electrical and computer science disciplines are presented

**Nonlinear Multiobjective Optimization** Kaisa Miettinen, 1999 Problems with multiple objectives and criteria are generally known as multiple criteria optimization or multiple criteria decision making MCDM problems So far these types of problems have typically been modelled and solved by means of linear programming However many real life phenomena are of a nonlinear nature which is why we need tools for nonlinear programming capable of handling several conflicting or incommensurable objectives In this case methods of traditional single objective optimization and linear programming are not enough we need new ways of thinking new concepts and new methods nonlinear multiobjective optimization Nonlinear Multiobjective Optimization provides an extensive up to date self contained and consistent survey review of the literature and of the state of the art on nonlinear deterministic multiobjective optimization its methods its theory and its background The amount of literature on multiobjective optimization is immense The treatment in this book is based on approximately 1500 publications in English printed mainly after the year 1980 Problems related to real life applications often contain irregularities and nonsmoothnesses The treatment of nondifferentiable multiobjective optimization in the literature is rather rare For this reason this book contains material about the possibilities background theory and methods of nondifferentiable multiobjective optimization as well This book is intended for both researchers and students in the areas of applied mathematics engineering economics operations research and management science it is meant for both professionals and practitioners in many different fields of application The intention has been to provide a consistent summary that may help in selecting an appropriate method for the problem to be solved It is hoped the extensive bibliography will be of value to researchers

**Optimization of Logistics** Alice Yalaoui, Hicham Chehade, Farouk Yalaoui, Lionel Amodeo, 2012-12-13 This book aims to help engineers Masters students and young researchers to understand and gain a general knowledge of logistic systems optimization problems and techniques such as system design layout stock management quality management lot sizing or scheduling It summarizes the evaluation and optimization methods used to solve the most frequent problems In particular the authors also emphasize some recent and interesting scientific developments as well as presenting some industrial applications and some solved instances from real life cases Performance evaluation tools Petri nets the Markov process discrete event simulation etc and optimization techniques branch and bound dynamic programming genetic algorithms ant colony optimization etc are presented first Then new optimization methods are presented to solve systems design problems layout problems and buffer sizing optimization Forecasting methods inventory optimization packing problems lot sizing quality management and scheduling are presented with examples in the final chapters

**Eco-design of Buildings and Infrastructure** Bruno Peuportier, Fabien Laurent, Jean Roger-Estrade, 2016-11-03 The Chair on Ecodesign for buildings and infrastructures was created by ParisTech in partnership with VINCI with the aim of developing evaluation and simulation tools that integrate all ecodesign aspects e g greenhouse gas emissions impact on biodiversity depletion of

resources etc and provide genuine decision aid instruments based on a scientific approach to all those involved in the urban environment i.e. designers, builders and users. The present book takes stock of five years of research under the Chair. It starts by presenting some methodological bases of ecodesign, life cycle assessments, impact studies and methods for planning and transport. Several specific subjects are then covered i.e. public transport, parking, road traffic, the environmental profile of building materials, building retrofits, energy management and biodiversity. The last part of the book sets out how the knowledge and tools developed under the Chair were applied to a case study, Cit Descartes in Marne la Vallée, Ile de France. This work is aimed at urban planners, local authorities, contracting clients, architects, engineering firms, contractors, building managers, research lecturers and anyone interested in the environmental quality of the places we live in. **Integrated**

**Design by Optimization of Electrical Energy Systems** Xavier Roboam, 2012-12-13. This book proposes systemic design methodologies applied to electrical energy systems in particular, integrated optimal design with modeling and optimization methods and tools. It is made up of six chapters dedicated to integrated optimal design. First, the signal processing of mission profiles and system environment variables are discussed. Then, optimization-oriented analytical models, methods and tools, design frameworks are proposed. A multi-level optimization smartly coupling several optimization processes is the subject of one chapter. Finally, a technico-economic optimization, especially dedicated to electrical grids, completes the book. The aim of this book is to summarize design methodologies based in particular on a systemic viewpoint by considering the system as a whole. These methods and tools are proposed by the most important French research laboratories which have many scientific partnerships with other European and international research institutions. Scientists and engineers in the field of electrical engineering, especially teachers, researchers, because of the focus on methodological issues, will find this book extremely useful, as will PhD and Masters students in this field. Multi-Objective Optimization using Evolutionary Algorithms

Kalyanmoy Deb, 2001-07-05. Evolutionary algorithms are relatively new but very powerful techniques used to find solutions to many real-world search and optimization problems. Many of these problems have multiple objectives which leads to the need to obtain a set of optimal solutions known as effective solutions. It has been found that using evolutionary algorithms is a highly effective way of finding multiple effective solutions in a single simulation run. Comprehensive coverage of this growing area of research. Carefully introduces each algorithm with examples and in-depth discussion. Includes many applications to real-world problems including engineering design and scheduling. Includes discussion of advanced topics and future research. Can be used as a course text or for self-study. Accessible to those with limited knowledge of classical multi-objective optimization and evolutionary algorithms. The integrated presentation of theory, algorithms and examples will benefit those working and researching in the areas of optimization, optimal design and evolutionary computing. This text provides an excellent introduction to the use of evolutionary algorithms in multi-objective optimization, allowing use as a graduate course text or for self-study.
