**Awards ... Third Division, National Railroad Adjustment Board** United States. National Railroad Adjustment Board, *Laser in Environmental and Life Sciences* Peter Hering, Jan Peter Lay, Sandra Stry, 2013-04-17 Studies of environmental conditions have become more and more important for our knowledge about the complex processes resulting from natural and man made influences on our environment. During recent years new analytical techniques have been developed that are mainly based on laser spectroscopy. They are not only more sensitive and reach lower detection limits but they also give more detailed information on the species under investigation and their interactions with the environment. They therefore can considerably deepen our understanding of correlations between different processes and their causes which is the precondition for avoiding ecological damage and for strengthening effective engagement in environmental protection. Also in life sciences revolutionary new techniques for diagnostics have been introduced which allow a thorough investigation of biological processes in plants and their dependence on environmental conditions. In particular for medical applications these new mainly non invasive techniques have influenced medical diagnostics and treatment considerably. This book deals with these very interesting interdisciplinary subjects which demand experience and knowledge about both fields the basic physics of the detection techniques and the relevant problems in environmental and life sciences. Therefore authors from a broad area of fundamental and applied research have contributed to this book which is organized in 4 sections: Remote sensing of the atmosphere, detection techniques for liquid and solid samples, applications to gaseous substances and aerosols, and finally applications in biology and medicine.

**Awards. Third Division, National Railroad Adjustment Board** United States. National Railroad Adjustment Board. Third Division, **De Optimo Reipublicae Statu, Deque Nova Insula Utopia** Saint Thomas More, 1995-02-16 First published in Latin in 1516 Thomas More's Utopia is one of the most influential books in the Western philosophical and literary tradition and one of the supreme achievements of Renaissance humanism. This is the first edition of Utopia since 1965 the Yale edition to combine More's Latin text with an English translation and also the first edition to provide a Latin text that is both accurate and readable. The text is based on the early editions with the Froben edition of March 1518 as copy text but spelling and punctuation have been regularized in accordance with modern practices. The translation is a revised version of the acclaimed lively and readable Adams translation which also appears in Cambridge Texts in the History of Political Thought. This edition which incorporates the results of recent Utopian scholarship also includes an introduction, textual apparatus, a full commentary and a guide to the voluminous scholarly and critical literature on Utopia.
