## Oracles Of Reason 1693:

*Oracles of the Cosmos* Paul Richard Blum, 2022-03-30 The divide between science and religion has its roots in the early modern period In the first part the popular talk of oracles of reason is traced back to the ancient oracles published in the 15th century and it is shown how this led to the emergence of a natural theology that does without revelation so that eventually reference to a divine creator seems superfluous In the second part using the concept of the cosmos it is shown that mathematics especially geometry has been part of the theological interpretation of Creation since the Middle Ages From this developed the concept of transcendence as rooted in human thought Therefore cosmos creation and humanity which are mutually exclusive form a unity of complementary elements The Bagford ballads (The Amanda group of Bagford poems)

ed. by J.W. Ebsworth John Bagford, 1878 **The Bagford Ballads** Joseph Woodfall Ebsworth, 1878 *The Pillars of Priestcraft Shaken* J. A. I. Champion, 1992 First published in 1992 this book examines the intellectual confrontation between priest and Freethinker from 1660 to 1730 and the origins of the early phase of the Enlightenment in England Through an analysis of the practice of historical writing in the period Champion maintains that historical argument was a central component for displaying defences of true religion Taking religion and specifically defences of the Church of England after 1660 as central to the politics of the period the first two chapters of the book explore the varieties of clericalist histories arguing that there were rival emphases upon regnum or sacerdos as the font of true religion The remainder of the book examines how radical Freethinkers like John Toland or the third Earl of Shaftesbury set about attacking the corrupt priestcraft of established religion but also importantly promoted a reforming civil theology **British Moralists being selections from writers principally of the eighteenth century** Lewis Amherst Selby-Bigge, 1897 **Bibliotheca Fageliana** Henric Fagel, 1802 **The Dictionary of National Biography** Leslie Stephen, Sir Sidney Lee, 1908

She shows how this current of thinking fed into the later eighteenth century Natural History of Man the earlier roots of which have been overlooked by many scholars Although much attention has been paid to the atheistic French materialists their link to the preceding period has been studied only partially and the current interest in what is called the Radical Enlightenment has served to obscure rather than enlighten this history By bringing out the importance of both Protestant theological debates and medical thinking in England and by following the different debates on the soul in Holland and France this book shows that attempts to find a single coherent strand of radical irreligious thought running through the early Enlightenment coming to fruition in the second half of the eighteenth century ignore the multiple channels which composed Enlightenment thinking
