Living Donor Organ Transplantation Austen Garwood-Gowers,2019-05-23 This book was originally published in 1999 When one or more essential organs failed the consequence used to be death However conventional medicine has developed artificial means of extending life the most successful of which is transplantation The most common form of organ to be transplanted is a kidney which will on average function for about a decade in its recipient Organ transplantation as a whole is widely practiced in most countries However few can procure enough organs to meet demand Many people who are suitable for a transplant die without getting one Many kidney patients can access and stay alive on dialysis until a suitable organ becomes available However even here sufficiency of organs would be beneficial because lesser reliance on dialysis would reduce healthcare costs and be better for patient quality of life This invaluable book shows that in the light of current practice and attitudes increasing living donor transplantation LDT levels is feasible It is one of the few works to systematically analyse the ethical and legal issues involved in LDT use in the light of empirical evidence including new data derived from a unique programme of interviews and questionnaires with transplant professionals living donors and recipients Readers are led to an understanding of when LDT is ethically and legally acceptable and to the strong case for using it much more extensively

lives do we live How many times do we die They say we all lose 21 grams at the exact moment of our death Everyone And how much fits into 21 grams How much is lost When do we lose 21 grams How much goes with them How much is gained How much is gained Twenty one grams The weight of a stack of five nickels The weight of a hummingbird A chocolate bar How much did 21 grams Paul Rivers leaves us with all these questions before he dies and in fact we need all these questions in order to reach a deeper understanding and to make sense of the movie So how much do 21 grams weigh And what are these 21 grams It is tempting to give a relatively simple answer from a medical or religious perspective We may say that gases exhaust from our body or even that the soul escapes from the body when we die But this movie goes a step further These 21 grams apparently weigh so little but in the end weigh a lot These 21 grams are the happiness of a family the target of revenge the reason for struggle they are life itself So our lives are dependent on these 21 grams which shows that life is really fragile And this leads us to the topic of this paper organ transplantation Organ transplantation gives us the possibility to save another person's life when our life is already over For many people it is self evident to donate an organ when someone else's life can be saved through that and it may seem that there are no real problems or questions concerning organ transplantation but there are Organ transplantation is a much more controversial issue as most people might believe and

Non-Heart-Beating Organ Transplantation Institute of Medicine,Roger Herdman,John T. Potts,1997-12-18 Non heart beating donors individuals whose deaths are determined by cessation of heart and respiratory function rather than loss of whole brain function could potentially be of major importance in reducing the gap between the demand for and available supply of organs for transplantation Prompted by questions concerning the medical management of such donors specifically whether interventions undertaken to enhance the supply and quality of potentially transplantable organs i e the use of anticoagulants and vasodilators were in the best interests of the donor patient the U S Department of Health and Human Services asked the Institute of Medicine to examine from scientific and ethical points of view alternative medical approaches that can be used to maximize the availability of organs from a donor in an end of life situation without violating prevailing ethical norms This book examines transplantation supply and demand historical and modern conceptions of non heart beating donors and organ procurement organizations and transplant program policies and contains recommendations concerning the principles and ethical issues surrounding the topic The Transplant Patient Paula T.
