Particular emphasis is placed on highly stereoselective organic chemistry including stereoselective alkylations, aldol reactions, oxidations, epoxidations and reductions. New methods for the stereoselective formation of carbon-carbon double bonds and modern application reactions are also fully considered. The book will be of use to students of chemistry and biochemistry at graduate and senior undergraduate level. It will also interest practising scientists in industry and research establishments who wish to familiarise themselves with modern synthetic methods.

Iron Compounds in Organic Synthesis Anthony J. Pearson, 1994 Despite this, the use of organoiron complexes in organic synthesis has been somewhat restricted compared with, for example, palladium, rhodium and other metals that are mainly used in catalytic processes.
