Radford, John S. Gero, 1980 This report examines the role of computers in the provision of information for architectural design decision making and compares the potential contributions of simulation generation and optimization techniques It argues that optimization models are particularly well suited to the provision of design information because they produce results which are prescriptive express design options and address the problems of the stability and sensitivity of solutions to change over time The difficulties posed by the multiple objectives which characterize architectural design problems are discussed and some solution approaches are described The report concludes that optimization concepts offer a powerful approach to design decision making and warrant much more research activity in the development of techniques and models for application in architecture      **Machine Design with CAD and Optimization** Sayed M. Office of Naval Research,1988 The complexity of engineering systems has increased to the extent that the interactive use of computers in their design has become more or less indispensable Current methods of heuristic design parameter adjustment via interactive computing are relatively ineffective The research covered by this report was aimed at developing a powerful general purpose optimization based computer aided engineering system design methodology The generality of our approach is made possible by the fact that a large variety of engineering design problems are transcribable into the form of a very small number of standard semi infinite optimization problems and because new system theoretic results facilitate the use of optimization in engineering design The reported research can be divided into three parts the first was concerned with the development of semi infinite optimization algorithms for engineering design the second one was devoted to the development of system theoretic results which facilitate the use of optimization in control system design and the third one was devoted to the development of an interactive software system which provides an appropriate environment
