Optoelectronic Packaging ,1993 Optoelectronics and photonics hold great potential for high data rate communication and computing Wide using in computing applications was limited first by device technologies and now suffers due to the need for high precision mass produced packaging The use of phontons as a medium of communication and control implies a unique set of packaging constraints that was not present in traditional telecommunications applications The state of the art in optoelectronic packaging is now driven by microelectric techniques that have potential for low cost and high volume manufacturing **International Symposium on Advances in Interconnection and Packaging** ,1991
