Tru64 UNIX Troubleshooting Martin Moore, Steven Hancock, 2002-12-10 Dealing with system problems from user login failures to server crashes is a critical part of a system administrator's job. A down system can cost a business thousands of dollars per minute. But there is little or no information available on how to troubleshoot and correct system problems. In most cases these skills are learned in an ad hoc manner usually in the pressure cooker environment of a crisis. This is the first book to address this lack of information. The authors both experienced Tru64 UNIX support engineer for Compaq systematically present the techniques and tools needed to find and fix system problems. The first part of the book presents the general principles and techniques needed in system troubleshooting. These principles and techniques are useful not only for UNIX system administrators but for anyone who needs to find and fix system problems. After this foundation the authors describe troubleshooting tools used in the UNIX environment. The remainder of the book covers specific areas of the Tru64 UNIX operating system in detail listing common problems their causes how to detect them and how to correct them. Each chapter includes a Before You Call Support section that details the most important things to check and correct before it's necessary to call Compaq technical support. The authors also include decision trees to help the reader systematically isolate particular problem types. Before You Call Tech Support sections Tables and diagrams for quick access to precise data. Decision trees to help choose the best way to troubleshoot a particular problem.

Security in Computing Systems Joachim Biskup, 2008-11-14 This monograph on

Security in Computing Systems Challenges Approaches and Solutions aims at introducing surveying and assessing the fundamentals of security with respect to computing Here computing refers to all activities which individuals or groups directly or indirectly perform by means of computing systems i.e. by means of computers and networks of them built on telecommunication We all are such individuals whether enthusiastic or just bowed to the inevitable So as part of the information society we are challenged to maintain our values to pursue our goals and to enforce our interests by consciously designing a global information infrastructure on a large scale as well as by appropriately configuring our personal computers on a small scale As a result we hope to achieve secure computing Roughly speaking computer assisted activities of individuals and computer mediated cooperation between individuals should happen as required by each party involved and nothing else which might be harmful to any party should occur The notion of security circumscribes many aspects ranging from human qualities to technical enforcement First of all in considering the explicit security requirements of users administrators and other persons concerned we hope that usually all persons will follow the stated rules but we also have to face the possibility that some persons might deviate from the wanted behavior whether accidentally or maliciously *JAVA Developer's Journal* ,1996
