Orchid Flowers: Their Pollination and Evolution Leendert Pijl, Calaway H. Dodson, 1966 Orchidaceae **An Atlas of Orchid Pollination** Nelis A. Van Der Cingel, 2026-02-02 This work follows on from the 1995 publication on European orchids. The atlas is now completed with a second part containing data on the pollination of orchids of the continents of America, Asia, Africa including Madagascar and Australia including New Zealand. The first part of the book is adapted from the general account of the previous publication and is extended with chapters on taxonomy and pollinators. The general account deals with such things as the history, evolution, morphology, chemistry and genetics of orchid pollination. The second part gives a systematic account for each continent of all well known details. The text is designed to have relevance for orchid lovers, whether professional or amateur.

The Pollination Biology of North American Orchids: Volume 1 Charles L. Argue, 2011-09-30 Recent studies have revealed remarkable complexity and diversity in orchid pollinator relationships. These studies comprise a vast literature currently scattered in numerous often obscure journals and books. *The Pollination Biology of North American Orchids* brings together for the first time a comprehensive treatment of this information for all native and introduced North American orchids found north of Mexico and Florida. It provides detailed information on genetic compatibility, breeding systems, pollinators, pollination mechanisms, fruiting success and limiting factors for each species. Distribution, habitat and floral morphology are also summarized. In addition, detailed line drawings emphasize orchid reproductive organs and their adaptation to known pollinators. This the first of two volumes furnishes a brief introduction to the general morphology of the orchid flower and the terminology used to describe orchid breeding systems and reproductive strategies. It treats the lady's slippers of genus *Cypripedium* subfamily *Cypripedioideae* and nine genera of the subfamily *Orchidoideae* including the diverse rein orchids of genus *Platanthera*. *The Pollination Biology of North American Orchids* will be of interest to both regional and international audiences including researchers and students in this field of study who are currently required to search through the scattered literature to obtain the information gathered here. Researchers and students in related fields with an interest in the co-evolution of plants and insects, conservation specialists who need to understand both the details of orchid reproduction and the identity of primary pollinators in order to properly manage the land for both orchid breeders who require accurate and current information on orchid breeding systems. General readers with an interest in orchid biology Charles Argue Ph.D. is a plant biologist at the University of Minnesota specializing in the study of pollen grains. His articles have appeared in numerous journals including the *American Journal of Botany*, *International Journal of Plant Sciences* formerly *Botanical Gazette*, *Botany* formerly *Canadian Journal of Botany*, *Grana*, *Pollen et Spores*, *North American Native Orchid Journal*, *The Native Orchid Conference Journal*, *Fremontia* and as chapters in a number of books. **The Pollination Biology of North American Orchids: Volume 2** Charles L. Mutualistic Interactions between Flowering Plants and Animals Palatty Allesh Sinu, KR Shivanna, 2016-03-01

The plant-animal interactions both mutualistic and antagonistic play a crucial role in the diversification of plants and animals and are important in functioning of communities in their natural habitats. The mutual interactions between the flowering plants and the animals in pollination and seed dispersal largely determine the reproductive success of the flowering plants. Maintenance of these eco services is critical for the sustainability of our biodiversity. India with its rich biodiversity and leveling of crop yields in recent years would benefit from research in the area of plant-animal interactions. This volume includes chapters on various aspects of mutualistic plant-animal interactions. In particular the fundamental and applied aspects of ecoservices, pollination and seed dispersal are covered comprehensively. It also covers tritrophic interaction and the potential of genomics in studies on the plant-animal interactions. The book will be of interest to post graduate students, teachers and researchers in the areas of Biology, Ecology, Botany, Zoology, Agri horticulture, Forestry and Conservation Biology.
