Ceramic Materials and Components for Engines Jürgen G. Heinrich, Fritz Aldinger, 2008-11-21 Several ceramic parts have

already proven their suitability for serial application in automobile engines in very impressive ways especially in Japan the USA and in Germany However there is still a lack of economical quality assurance concepts Recently a new generation of ceramic components for the use in energy transportation and environment systems has been developed The efforts are more and more system oriented in this field The only possibility to manage this complex issue in the future will be interdisciplinary cooperation Chemists physicists material scientists process engineers mechanical engineers and engine manufacturers will have to cooperate in a more intensive way than ever before The R D activities are still concentrating on gas turbines and reciprocating engines but also on brakes bearings fuel cells batteries filters membranes sensors and actuators as well as on shaping and cutting tools for low expense machining of ceramic components This book summarizes the scientific papers of the 7th International Symposium Ceramic Materials and Components for Engines Some of the most fascinating new applications of ceramic materials in energy transportation and environment systems are presented The proceedings shall lead to new ideas for interdisciplinary activities in the future
