**New Mathematical Advances in Economic Dynamics** David F. Batten, Paul F. Lesse, 2018-02-28 Originally published in 1985 Mathematical methods and models to facilitate the understanding of the processes of economic dynamics and prediction were refined considerably over the period before this book was written The field had grown and many of the techniques involved became extremely complicated Areas of particular interest include optimal control non linear models game theoretic approaches demand analysis and time series forecasting This book presents a critical appraisal of developments and identifies potentially productive new directions for research It synthesises work from mathematics statistics and economics and includes a thorough analysis of the relationship between system understanding and predictability *New Mathematical Advances in Economic Dynamics* Mohd. Beckmann, Borje Johansson, Folke Snickars, Roland Thord, 2012-12-06 Ake E Andersson has always been intellectually on the move He has selected his own track through the academic system and has formed a school of thought which has brought him international recognition The cornerstones of his scientific interest are welfare analysis regional economic dynamics and human capital theory For his excellent achievements on dynamic analysis in the field of regional economics and regional planning he received the Japanese Honda Prize in 1995 This book provides a sample of the broad ranging research of Ake E Andersson Here some of his friends and colleagues have contributed to give various examples from the growing research field Knowledge and Networks in a Dynamic Economy in which he has been a great inspiration and in which he has contributed as part of his prodigious output **Financial Networks** Anna

Nagurney, Stavros Siokos, 2012-12-06 Financial analysis is concerned with the study of capital flows over time and space This book presents a new theory of multi sector multi instrument financial systems based on the visualization of such systems as networks The framework is both qualitative and computational and depends crucially on the methodologies of finite dimensional variational inequality theory for the study of statics and equilibrium states and on projected dynamical systems for the study of dynamics and disequilibrium behavior Moreover it adds a graphical dimension to the fundamental economic structure of financial systems and their evolution through time **Routledge Library Editions: Econometrics**

Various,2019-01-15 Reissuing works originally published between 1929 and 1991 this collection of 17 volumes presents a variety of considerations on Econometrics from introductions to specific research works on particular industries With some volumes on models for macroeconomics and international economies this is a widely interesting set of economic texts Input Output methods and databases are looked at in some volumes while others look at Bayesian techniques linear and non linear models This set will be of use to those in industry and business studies geography and sociology as well as politics and economics *Proceedings of the ... Alexander J. Zaslavski,2022-06-28 This book is devoted to the study of two large classes of discrete time optimal control problems arising in mathematical economics Nonautonomous optimal control problems of the first class are determined by a sequence of objective functions and sequence of constraint maps They correspond to a general model of economic growth We are interested in turnpike properties of approximate solutions and in the stability of the turnpike phenomenon under small perturbations of objective functions and constraint maps The second class of autonomous optimal control problems corresponds to another general class of models of economic dynamics which includes the Robinson Solow Srinivasan model as a particular case In Chap 1 we discuss turnpike properties for a large class of discrete time optimal control problems studied in the literature and for the Robinson Solow Srinivasan model In Chap 2 we introduce the first class of optimal control problems and study its turnpike property This class of problems is also discussed in Chaps 3 6 In Chap 3 we study the stability of the turnpike phenomenon under small perturbations of the objective functions Analogous results for problems with discounting are considered in Chap 4 In Chap 5 we study the stability of the turnpike phenomenon under small perturbations of the objective functions and the constraint maps Analogous results for problems with discounting are established in Chap 6 The results of Chaps 5 and 6 are new The second class of problems is studied in Chaps 7 9 In Chap 7 we study the turnpike properties The stability of the turnpike phenomenon under small perturbations of the objective functions is established in Chap 8 In Chap 9 we establish the stability of the turnpike phenomenon under small perturbations of the objective functions and the constraint maps The results of Chaps 8 and 9 are new In Chap 10 we study optimal control problems related to a model of knowledge based endogenous economic growth and show the existence of trajectories of unbounded economic growth and provide estimates for the growth rate Economic Dynamics with Memory Vasily E.

Tarasov,Valentina V. Tarasova,2021-01-18 This book presents the applications of fractional calculus fractional operators of non integer orders and fractional differential equations in describing economic dynamics with long memory Generalizations of basic economic concepts notions and methods for the economic processes with memory are suggested New micro and macroeconomic models with continuous time are proposed to describe the fractional economic dynamics with long memory
