Parents and the Evolving Math Curriculum

Kailyn Heather Scobie, 2022 The current day mathematics curriculum is evidently different from the traditional means of teaching math Due to this there exist disparities between a child's math education and their parent or guardian's math education This thesis will present firsthand evidence on how these disparities affect a parent's perception of current day curriculum the extent to which parents can support their child in their learning of mathematics at home and will strive to attend to the needs of both the parents or guardians as well as students in supporting the learning of these new concepts and strategies With this the research question asks What are parents or guardians perceptions of current day math curricula and how can I best support families in their understanding of the mathematics being taught This research lies in the survey study that was sent to parents or guardians of kindergarten through sixth grade students from a specific school that I was associated with at the time The results determined the need for educators to better support parents in their support of their children's mathematical understandings Therefore this thesis will provide educators with an understanding of parental perceptions and inquiries on mathematics as well as a plethora of resources strategies and examples that can be used as a stepping stone to bridge the gap between the old mathematics and the new mathematics Leaf 2

A Parent's Guide to More New Math Evelyn Sharp, 1966 For

the parents of younger pupils.

A Parent's Guide to Understanding Math Education in Today's Schools Cathrine Kellison, Catherine Twomey Fosnot, 2012-12-01 Mathematics education in the schools today often looks quite different to parents than what they remember from their past schooling. Emphasis has shifted away from pencil paper arithmetic and drill to mental arithmetic and a deep understanding of number and operation as a foundation for algebra. As a result of new standards children today are expected to write mathematical arguments, choose appropriate models, analyze patterns and solve problems. Some parents may be skeptical of the changes and create difficulties for schools trying to reform. Pressure from these parents who are upset may lead a school to abandon reform efforts to meet the new standards. Other parents are supportive of the changes but often feel inadequately prepared to help their children at home. Many even suffer from math anxiety. This book is designed to provide information to parents about the changes and why they have come about. Secondly it provides much information about what parents can do at home to help their children be successful including a section on mental computation and its importance in today's world dominated by handheld digital devices. The book and related DVD can also be beneficial to the home schooling market.

mathematics while reviewing middle school and high school math concepts in a clear and mathphobe friendly way Adult Catalog: Subjects Los Angeles County Public Library,1970 **Math Education for America?** Mark Wolfmeyer,2013-12-04
Math Education for America analyzes math education policy through the social network of individuals and private and public organizations that influence it in the United States The effort to standardize a national mathematics curriculum for public schools in the U S culminated in 2010 when over 40 states adopted the Common Core State Standards for Mathematics
Rather than looking at the text of specific policy documents this book complements existing critical reviews of the national math education curriculum by employing a unique social network analysis Breaking new ground in detailing and theorizing the politics of math education Wolfmeyer argues that the private interests of this network are closely tied to a web of interrelated developments human capital education policy debates over traditional and reform pedagogy the assumed content knowledge deficit of math teachers and the proliferation of profit driven educational businesses By establishing the interconnectedness of these interests with the national math education curriculum he shows how the purported goals of math education reform are aligned with the prevailing political agendas of this social network rather than the national interest

Math Wars Carmen Latterell,2004-12-30 This book is written for parents and other interested parties so that they can understand the great debate taking place in many states in this country about how to teach basic math The debate centers around the standards written by the National Council of Teachers of Mathematics NCTM which call for a radically different approach to mathematics education Because the issues are so heated between the NCTM oriented curricula and traditional curricula the curricula that NCTM oriented replaced the term Math Wars was coined to describe them Parents are concerned about their children s math learning Teachers are concerned about math teaching When parents see what children are bringing home under the new curriculum it is clear that their children are not working on the same mathematics that parents remember from the time when they were in school But the problem goes beyond grades K 12 Post secondary mathematics courses are the fear of many students The standards created by the NCTM do not necessarily prepare students for success either on SATs or in college Besides lack of knowledge about mathematics education many parents have an additional problem in that they feel they lack knowledge in mathematics itself This is very intimidating thus it is difficult for parents to do anything about the confusing state of mathematics education This book provides some answers *New Mathematics for Parents* Ralph T.
