Parallel And Distributed Processing In Structural Engineering:

Parallel and Distributed Processing in Structural Engineering Hojjat Adeli, 1988 **Parallel Processing in Structural Engineering** H. Adeli, O. Kamal, 2003-10-04 The first of its kind this book presents applications of parallel processing in structural engineering from introductory concepts and detailed algorithms for analysis and optimisation of structures to special stratagems and implementation of the algorithms using C Neural Networks in the Analysis and Design of Structures Zenon Waszczyszyn, 2014-05-04 Neural Networks are a new interdisciplinary tool for information processing Neurocomputing being successfully introduced to structural problems which are difficult or even impossible to be analysed by standard computers hard computing The book is devoted to foundations and applications of NNs in the structural mechanics and design of structures *Parallel Computational Methods for Large-scale Structural Analysis and Design*, 1994

Advances in Parallel and Vector Processing for Structural Mechanics B. H. V. Topping, Manolis Papadrakakis, 1994 Includes a selection of papers that were presented at the Second International Conference on Computational Structures Technology held in Athens Greece from 30 August 1 September 1994 *High Performance Computing in Structural Engineering* Hojjat Adeli, Roesdiman Soegiarso, 1998-11-30 High performance multiprocessor computers provide new and interesting opportunities to solve large scale structural engineering problems However the development of new computational models and algorithms that exploit the unique architecture of these machines remains a challenge High Performance Computing in Structural Engineering explores the use of supercomputers with vectorization and parallel processing capabilities in structural engineering applications The book focuses on the optimization of large structures subjected to the complicated implicit and discontinuous constraints of commonly used design codes and presents robust parallel algorithms for analysis of these structures The authors apply the algorithms to and analyze the performance of minimum weight designs of large steel space trusses and moment resisting frames with or without bracings consisting of discrete standard shapes They clearly show that adroit and judicious use of vectorization techniques can improved the speedup of an optimization algorithm and that parallel processing can lead to even further speedup With its review of the necessary background material generous illustrations and unique content this is the definitive resource for the analysis and optimization of structure on shared memory multiprocessor computers By extension High Performance Computing in Structural Engineering will prove equally valuable in distributed computing on a cluster of workstations **Parallel and Distributed Systems, 1994 International Conference On** Lionel M. engineering practice This book contains contributions from an international group of accomplished researchers and practitioners from various branches of soil and rock engineering and presents the latest theoretical developments and practical applications of modeling in geomechanics Chapters are grouped into four main sections Computational procedures Constitutive modeling and testing Modeling and simulation Applications Efforts have been made to include recent developments and provide suggestions and examples as to how these can be applied in modeling actual engineering problems Researchers practitioners and students in geomechanics mechanics of solids soil and rock engineering will find this book an invaluable reference
