Mips Risc Architecture:

MIPS RISC Architecture Gerry Kane, Joe Heinrich, 1992 A complete reference manual to MIPS RISC architecture this book describes the user instruction set together with extension to the ISA It details specific implementations of RISC architecture as exemplified by the R2000 R3000 R4000 and R6000 processors The book describes the general characteristics and capabilities of each processor along with programming models which describes how data is represented in the CPU register and in memory RISC CPU registers are summarized and the underlying concepts that characterize RISC architectures in general are overviewed A Programmer's View of Computer Architecture James Goodman, Karen

Miller, 1993 This introductory text offers a contemporary treatment of computer architecture using assembly and machine language with a focus on software Students learn how computers work through a clear generic presentation of a computer architecture a departure from the traditional focus on a specific architecture A computer's capabilities are introduced within the context of software reinforcing the software focus of the text Designed for computer science majors in an assembly language course this text uses a top down approach to the material that enables students to begin programming immediately and to understand the assembly language the interface between hardware and software The text includes examples from the MIPS RISC reduced instruction set computer architecture and an accompanying software simulator package simulates a MIPS RISC processor the software does not require a MIPS processor to run **MIPS RISC Architecture (NEC Ed.)**

The MIPS-X RISC Microprocessor Paul Chow, 2013-03-09 The first Stanford MIPS project started as a special graduate course in 1981 That project produced working silicon in 1983 and a prototype for running small programs in early 1984 After that we declared it a success and decided to move on to the next project MIPS X This book is the final and complete word on MIPS X The initial design of MIPS X was formulated in 1984 beginning in the Spring At that time we were unsure that RISC technology was going to have the industrial impact that we felt it should We also knew of a number of architectural and implementation flaws in the Stanford MIPS machine We believed that a new processor could achieve a performance level of over 10 times a VAX 11 780 and that a microprocessor of this performance level would convince academic skeptics of the value of the RISC approach We were concerned that the flaws in the original RISC design might overshadow the core ideas or that attempts to industrialize the technology would repeat the mistakes of the first generation designs MIPS X was targeted to eliminate the flaws in the first generation designs and to boost the performance level by over a factor of five **A**
