Lectures on the Nearest Neighbor Method Gérard Biau,Luc Devroye,2015-12-08 This text presents a wide ranging and rigorous overview of nearest neighbor methods one of the most important paradigms in machine learning Now in one self contained volume this book systematically covers key statistical probabilistic combinatorial and geometric ideas for understanding analyzing and developing nearest neighbor methods G rard Biau is a professor at Universit Pierre et Marie Curie Paris Luc Devroye is a professor at the School of Computer Science at McGill University Montreal *Data Structures, Near Neighbor Searches, and Methodology* Michael H. Goldwasser,David S. Johnson,Catherine C. McGeoch, This book presents reviewed and revised papers from the fifth and sixth DIMACS Implementation Challenge workshops These workshops held approximately annually aim at encouraging high quality work in experimental analysis of data structures and algorithms The papers published in this volume are the results of year long coordinated research projects and contain new findings and insights Three papers address the performance evaluation of implementations for two fundamental data structures dictionaries and priority queues as used in the context of real applications Another four papers consider the still evolving topic of methodologies for experimental algorithmics Five papers are concerned with implementations of algorithms for nearest neighbor search in high dimensional spaces an area with applications in information retrieval and data mining on collections of Web documents DNA sequences images and various other data types *An Elementary Introduction to Statistical Learning Theory* Sanjeev Kulkarni,Gilbert Harman,2011-06-09 A thought provoking look at statistical learning theory and its role in understanding human learning and inductive reasoning A joint endeavor from leading researchers in the fields of philosophy and electrical engineering An Elementary Introduction to Statistical Learning Theory is a comprehensive and accessible primer on the rapidly evolving fields of statistical pattern recognition and statistical learning theory Explaining these areas at a level and in a way that is not often found in other books on the topic the authors present the basic theory behind contemporary machine learning and uniquely utilize its foundations as a framework for philosophical thinking about inductive inference Promoting the fundamental goal of statistical learning knowing what is achievable and what is not this book demonstrates the value of a systematic methodology when used along with the needed techniques for evaluating the performance of a learning system First an introduction to machine learning is presented that includes brief discussions of applications such as image recognition speech recognition medical diagnostics and statistical arbitrage To enhance accessibility two chapters on relevant aspects of probability theory are provided Subsequent chapters feature coverage of topics such as the pattern recognition problem optimal Bayes decision rule the nearest neighbor rule kernel rules neural networks support vector machines and boosting Appendices throughout the book explore the relationship between the discussed material and related topics from mathematics philosophy psychology and statistics drawing insightful connections

between problems in these areas and statistical learning theory All chapters conclude with a summary section a set of practice questions and a reference sections that supplies historical notes and additional resources for further study An Elementary Introduction to Statistical Learning Theory is an excellent book for courses on statistical learning theory pattern recognition and machine learning at the upper undergraduate and graduate levels It also serves as an introductory reference for researchers and practitioners in the fields of engineering computer science philosophy and cognitive science that would like to further their knowledge of the topic

Case-Based Approximate Reasoning Eyke Hüllermeier, 2007-03-20 Making use of different frameworks of approximate reasoning and reasoning under uncertainty notably probabilistic and fuzzy set based techniques this book develops formal models of the above inference principle which is fundamental to CBR The case based approximate reasoning methods thus obtained especially emphasize the heuristic nature of case based inference and aspects of uncertainty in CBR
