

Minimal Brain Dysfunction in Children: Pre-, Peri-, Postnatal Factors and Developmental Characteristics

M. GOODMAN, PhD and C. GOODMAN, BA

SUMMARY

The importance of medical and developmental phenomena is emphasized in the diagnosis of minimal brain dysfunction in children. Yet there is little information about these areas compared with psychologically oriented criteria. A small sample of identified children subjected to a detailed and systematic survey showed little variation from normative expectations in terms of developmental milestones.

Although a typical presentation was not apparent, the survey shows that pre- and perinatal complications may be contributors to later learning problems. However, the authors advocate greater precision through a correlational approach as a prerequisite to further insight about the syndrome.

DURING THE PAST TWO decades the clinical syndrome of minimal brain dysfunction as a causative factor in learning and behavior disorders of children has received considerable attention. Before 1920 related literature was limited and focused on brain damage sustained by adults. Specific aspects of the condition were described in segmented fashion during the following 30 years.¹⁻² Strauss and Lehtinen³, whose work is still considered a classic in the area, provided a more comprehensive approach. However, in spite of extensive literature and research, confusion, variability and ambiguity exist. In the conclusion of a recent factor analytic study, Paine et al suggest: "Thus, minimal cerebral dysfunction is not a homogeneous diagnostic entity, but rather a way of describing a variety of unrelated minor dysfunctions, some

neurological, some behavioral and some cognitive, which may put a child in difficulties with his social and familial environment."⁴

Attempts have been made to provide clarity and consistency.

Stressing that a learning disability provides the core for homogeneity of the condition, and that manifestations are typically behavioral, rather than neurological, Johnson and Myklebust,⁵ with orientational reference to Luria,⁶ proposed the term "psychoneurological learning disability". The latter implies that behavior is affected by brain dysfunction, the problem consisting of processes alteration, rather than incapacity to learn. In order to distinguish the numerous handicaps found in children, included in the syndrome are adequate hearing and vision, average to high intelligence, and relatively adequate emotional adjustment. Consequently, the diagnostic process includes examination of sensation, perception, imagery, symbolization; inner, receptive, and expressive language, and conceptualization. Johnson and Myklebust stress "integrities" that must be present for learning and categorize on the basis of peripheral and central nervous system functions. Readiness is a central concept in the scheme and, consequently, is highly interrelated with developmental characteristics.

The second example of an attempt toward clarification was co-sponsored by the National Society for Crippled Children and Adults, Inc. and the National Institute of Neurological Diseases and Blindness, Public Health Service, U.S.A. Published in 1966, *Minimal Brain Dysfunction in*

Dr. Goodman is Chief Psychologist, the Board of Education for the Borough of North York, Downsview, Ont. Mrs. Goodman is a nursery school teacher. She is chairman of the Parent Participation Preschools of Metro Toronto.

The reported data were obtained while C. Goodman and M. Goodman were program director and professional services consultant respectively for the Integra Foundation, 1968/69.

Neurodevelopmental Approach to Specific Learning Disorders Hilary Hart,Kingsley Whitmore,Guy Willems,1999-02-03

This volume considers the neurodevelopmental disorders such as dyslexia dyscalculia dysgraphia clumsiness and indeed all those learning difficulties to be found in a normal school population with an IQ of more than 70 Specific ideas about the causes of these disorders are presented along with very practical preventative and management information which will be welcomed by a wide range of professionals with an interest in paediatrics neurology developmental and educational psychology Handbook of Family Violence Alan S. Bellack,Michel Hersen,R.L. Morrison,Vincent B. Van Hasselt,2013-06-29

In the last decade there has been heightened clinical and investigative activity in the area of family violence This of course is partly attributable to recent surveys showing a high incidence of family violence in the United States For example there are indications that nearly 30% of married women in this country are victims of physical abuse by spouses at some point in their marriage Further FBI statistics show that approximately 13% of all homicides are husband wife killings Moreover it has been projected that such figures are likely to increase over the next several years Consistent with these trends funding of family violence research by both federal and private agencies has increased Indeed federal agencies such as the National Institute of Mental Health and the National Institute of Law Enforcement and Criminal Justice have provided considerable support for work in this area In addition family violence particularly wifebattering child abuse and sexual abuse of children has been the focus of media attention at the national level and has generated intensive interest in both lay and professional publications Moreover there have been several recent governmental hearings and investigations regarding the prevalence of these problems

Introduction to Behavioral Science in Medicine F.R. Hine,R.C. Carson,G.L. Maddox,R.J. Jr. Thompson,R.B. Williams,2012-12-06 This book is the product of many years experience teaching behavioral science in a way that demonstrates its relevance to clinical

medicine We have been guided by the reactions and evaluations of many first year medical students The result is a conceptual framework different from those that we and others had tried before Because the clinical relevance of knowledge about human behavior is less apparent to many first year students than that of the other traditional pre clinical courses books and courses organized as brief introductions to psychology sociology and behavioral neurology have often been poorly received Various medical schools and texts have explored ways to overcome this difficulty One text organizes the presentation around very practical problems which are of unmistakable interest to the future physician the therapeutic relationship death and dying sexuality and pain to give a few examples Another emphasizes stages of development periods of the human life cycle as its organizing principle Both of these approaches have merit and have been used successfully in various schools They seem to us however to have a potentially serious shortcoming They focus student attention too much on the more immediately intriguing issues of specific clinical problems or on the more easily recognized age specific behavioral issues In the limited time available the teaching of general principles of human behavioral functioning may then be neglected
