Mirrors Reflection:

Mirrors and Reflections Alexandre V. Borovik, Anna Borovik, 2009-11-07 *Mirrors and Reflections* presents a systematic and elementary introduction to the properties of finite groups generated by reflections. The approach is based on fundamental geometric considerations in Coxeter complexes and emphasizes the intuitive geometric aspects of the theory of reflection groups. The exposition is directed at advanced undergraduates and first year graduate students and features a large number of exercises at various levels of difficulty.

Introduction to Geometrical Optics Milton Katz, 2002 This book is the culmination of twenty five years of teaching Geometrical Optics. The volume is organised such that the single spherical refracting surface is the basic optical element. Spherical mirrors are treated as special cases of refraction with the same applicable equations. Thin lens equations follow as combinations of spherical refracting surfaces while the cardinal points of the thick lens make it equivalent to a thin lens. Ultimately one set of vergence equations are applicable to all these elements. The chapters are devoted to in depth treatments of stops pupils and ports magnifiers microscopes telescopes and camera lenses ophthalmic instruments resolving power and MTF trigonometric ray tracing and chromatic and monochromatic aberrations. There are over 100 worked examples 400 homework problems and 400 illustrations. First published in 1994 by Penumbra Publishing Co.
