Alphose Zingoni, 2019-08-21 Advances in Engineering Materials, Structures and Systems Innovations, Mechanics and Applications comprises 411 papers that were presented at SEMC 2019 the Seventh International Conference on Structural Engineering Mechanics and Computation held in Cape Town, South Africa from 2 to 4 September 2019. The subject matter reflects the broad scope of SEMC conferences and covers a wide variety of engineering materials both traditional and innovative and many types of structures. The many topics featured in these Proceedings can be classified into six broad categories that deal with:

- i the mechanics of materials and fluids elasticity, plasticity, flow through porous media, fluid dynamics, fracture, fatigue, damage, delamination, corrosion, bond, creep, shrinkage, etc.
- ii the mechanics of structures and systems structural dynamics, vibration, seismic response, soil structure interaction, fluid structure interaction, response to blast and impact, response to fire, structural stability, buckling, collapse, behaviour.
- iii the numerical modelling and experimental testing of materials and structures numerical methods, simulation techniques, multi scale modelling, computational modelling, laboratory testing, field testing, experimental measurements.
- iv innovations and special structures nanostructures, adaptive structures, smart structures, composite structures, bio inspired structures, shell structures, membranes, space structures, lightweight structures, long span structures, tall buildings, wind turbines, etc.
