## **Mind In Evolution:**

The Evolution of Mind Denise D. Cummins, Colin Allen, 1998 Our understanding of the human mind has radically changed in recent years from the unified mind once envisioned by Rene Descartes over three hundred years ago to a new understanding of mind as a set of specialized cognitive components gradually accumulated in our evolutionary past As a result many scientists and philosophers now believe that our minds emerged out of the same type of evolutionary processes that have shaped our bodies In The Evolution of Mind outstanding figures on the cutting edge of evolutionary psychology follow clues provided by current neuroscientific evidence to illuminate many puzzling questions of human cognitive evolution With contributions from psychologists ethologists anthropologists and philosophers the book offers a broad range of approaches to explore the mysteries of the mind's evolution from investigating the biological functions of human cognition to drawing comparisons between human and animal cognitive abilities This interdisciplinary work presents a comparative and evolutionary perspective on a wide variety of topics including mental algorithms for reasoning about contingencies quantities social norms and the minds of others social play and communicative abilities thought and language and the role of Darwin's theory of natural selection in evolutionary psychology Written in a highly readable style The Evolution of Mind will appeal to a broad range of researchers and students and help set the agenda for the field for years to come *A Mind So Rare* Merlin Donald, 2001 Donald psychology Queen's University Canada challenges the prevailing view that seeks to explain away human consciousness and presents a theory on the origins of the modern mind He describes the cultural and neuronal forces that power human modes of awareness and proposes that the human mind is a hybrid product of the interweaving of the brain with an invisible symbolic web of culture to form a distributed cognitive network Using evidence from brain and behavioral studies of humans and animals he explains how an expansion of consciousness transcends the limitations of the mammalian mind and elaborates the foundations of self evaluation and self reflection c Book News Inc *Mind in Evolution* Leonard Trelawney Hobhouse, 1901 **MIND IN EVOLUTION** L. T. HOBHOUSE, 2018 **The Long Evolution of Brains and Minds** Gerhard Roth, 2013-06-03 The main topic of the book is a reconstruction of the evolution of nervous systems and brains as well as of mental cognitive abilities in short intelligence from simplest organisms to humans It investigates to which extent the two are correlated One central topic is the alleged uniqueness of the human brain and human intelligence and mind It is discussed which neural features make certain animals and humans intelligent and creative Is it absolute or relative brain size or the size of intelligence centers inside the brains the number of nerve cells inside the brain in total or in such intelligence centers decisive for the degree of intelligence of mind and eventually consciousness And which are the driving forces behind these processes Finally it is asked what all this means for the classical problem of mind brain relationship and for a naturalistic theory of mind **Mind in Evolution** L. The Biased Mind Jérôme Boutang, Michel De Lara, 2015-09-15 Using a wealth of anecdotes data from academic literature and original research this very accessible little book highlights how we all struggle to cope with the maelstrom of choices influences and experiences that come our way The authors have slogged through piles of dry research papers to provide many wonderful nuggets of information and surprising insights For example Why is an upside down red triangle such a powerful warning sign on the road What is the best kind of alibi What makes the number 7 so special Why is it better to whisper words of love into the left ear Will that recent marriage last Why is it that the French eat snails but not slugs The reader will discover the amazing tools and shortcuts that millennia of evolution have built into our brains And this knowledge is power Knowing more about how the human mind connects the dots helps us understand why decision making is so tricky With insights from evolutionary psychology we become better equipped to understand ourselves and others and to interact and communicate more effectively

Evolution of Mind, Brain, and Culture Gary Hatfield, Holly Pittman, 2013-05-28 Descartes boldly claimed I think therefore I am But one might well ask Why do we think How When and why did our human ancestors develop language and culture In other words what makes the human mind human Evolution of Mind Brain and Culture offers a comprehensive and scientific investigation of these perennial questions Fourteen essays bring together the work of archaeologists cultural and physical anthropologists psychologists philosophers geneticists a neuroscientist and an environmental scientist to explore the evolution of the human mind the brain and the human capacity for culture The volume represents and critically engages major theoretical approaches including Donald s stage theory Mithen s cathedral model Tomasello s joint intentionality and Boyd and Richerson s modeling of the evolution of culture in relation to climate change No recent publication combines this breadth of evidential and theoretical perspective The essays range in topic from the macroscopic the evolution of social cooperation to the microscopic examining genetic data to infer evolutions in brain structure and function and from the ancient paleoanthropological reconstructions of hominin cognitive abilities to the modern including modern hominin s similarities to our primate cousins Considered together these essays constitute a fascinating detailed look at what makes us human PMIRC volume 5

Plotkin,1997 From the nature nurture question which has occupied philosophers and scientists for thousands of years to the most recent debates about how the mind is structured Plotkin looks at what it means to be human from an evolutionist s perspective      **The Adapted Mind** Jerome H. Barkow,Leda Cosmides,John Tooby,1992 Although researchers have long been aware that the species typical architecture of the human mind is the product of our evolutionary history it has only been in the last three decades that advances in such fields as evolutionary biology cognitive psychology and paleoanthropology have made the fact of our evolution illuminating Converging findings from a variety of disciplines are leading to the emergence of a fundamentally new view of the human mind and with it a new framework for the behavioral and social sciences First with the advent of the cognitive revolution human nature can finally be defined precisely as the set of universal species typical information processing programs that operate beneath the surface of expressed cultural variability Second this collection of cognitive programs evolved in the Pleistocene to solve the adaptive problems regularly faced by our hunter gatherer ancestors problems such as mate selection language acquisition co operation and sexual infidelity Consequently the traditional view of the mind as a general purpose computer tabula rasa or passive recipient of culture is being replaced by the view that the mind resembles an intricate network of functionally specialized computers each of which imposes contentful structure on human mental organization and culture The Adapted Mind explores this new approach evolutionary psychology and its implications for a new view of culture      *Evolution and the Social Mind* Joseph P. Forgas,Martie G. Haselton,William von Hippel,2011-03-15 This book seeks to combine the study of human social cognition the way we think decide plan and analyze social situations with an evolutionary framework that considers these activities in light of evolutionary adaptations for solving problems of survival faced by our ancestors over thousands of generations The chapters report recent research and theories illustrating how evolutionary principles can shed new light on the subtle and often subconscious ways that cognitive

mechanisms guide peoples thoughts memories judgments attitudes and behaviors in social life The contributors to this volume who are leading researchers in their fields seek answers to such intriguing questions as how can evolutionary principles help to explain human beliefs attitudes judgments prejudice and group preferences Are there benefits to behaving unpredictably Why are prototypical faces more attractive than atypical ones How do men and women think about and select potential mates What are the adaptive functions of negative affect What are the evolutionary influences on the way people think about and respond to social exclusion and ostracism Evolution and the Social Mind offers a highly integrated and representative coverage of this emerging field and is suitable as a textbook in advanced courses dealing with social cognition and evolutionary psychology
