Freeman,2000 I think therefore I am The legendary pronouncement of philosopher Ren Descartes lingers as accepted wisdom in the Western world nearly four centuries after its author's death But does thought really come first Who actually runs the show we our thoughts or the neurons firing within our brains Walter J Freeman explores how we control our behavior and make sense of the world around us Avoiding determinism both in sociobiology which proposes that persons genes control their brains functioning and in neuroscience which posits that their brains disposition is molded by chemistry and environmental forces Freeman charts a new course one that gives individuals due credit and responsibility for their actions Drawing upon his five decades of research in neuroscience Freeman utilizes the latest advances in his field as well as perspectives from disciplines as diverse as mathematics psychology and philosophy to explicate how different human brains act in their chosen diverse ways He clarifies the implications of brain imaging by which neural activity can be observed during the course of normal movements and shows how nonlinear dynamics reveals order within the fecund chaos of brain function

Philosophy of Artificial Intelligence Rajakishore Nath,2009 This book deals with the major philosophical issues in the theoretical framework of Artificial Intelligence AI in particular and cognitive science in general The researchers in AI are concerned with the issues of consciousness human subjectivity creativity etc Cognitive Science and AI argue that consciousness can be artificially created and comprehended in the function of robots The robotic activities explain the mechanism involved in computation language processing sensing the information etc Contrary to this thesis the philosophical study tries to show that human consciousness thinking imagination etc are much larger concepts and need to be delved into in the broad theoretical framework This book is a critique of the mechanistic theory of mind It shows the basic foundation of AI and its limitations in explaining the activities of the human mental life Machine functionalism fails to account for the subjective nature of consciousness and the creativity involved in the conscious acts There are two aspects of this thesis the epistemological and the metaphysical Epistemologically the subject of consciousness intimately knows the raw feelings or the qualia Metaphysically speaking however the raw feelings are real in the sense that they are part of the furniture of the mental world Therefore we can hardly deny that the mental world is real
