While this has levelled the playing field between already prominent and new artists, creators may now be dependent on platform decisions about which songs and artists to promote. With Spotify emerging as a major interactive streaming platform, this paper explores the effect of Spotify's playlists on both the promotion of songs and the discovery of music by new artists using four approaches. First we examine songs' streaming volumes before and after their addition to and removal from major global playlists. Second we compare streaming volumes for songs just on and just off algorithmic top 50 playlists. Third we make use of cross country

differences in inclusion on New Music Friday lists using song fixed effects to explain differences in streaming Fourth we develop an instrumental variables approach to explaining cross country New Music Friday rank differentials based on home bias Being added to Today s Top Hits a list with 18 5 million followers during the sample period raises streams by almost 20 million and is worth between 116 000 and 163 000 Inclusion on New Music Friday lists substantially raises the probability of song success including for new artists
