## **One Course Meals:**

**Meals in Science and Practice** H L Meiselman, 2009-03-26 The meal is the key eating occasion yet professionals and researchers frequently focus on single food products rather than the combinations of foods and the context in which they are consumed. Research on meals is also carried out in a wide range of fields and the different disciplines do not always benefit from each other's expertise. This important collection presents contributions on meals from many perspectives using different methods and focusing on the different elements involved. Two introductory chapters in part one summarise the key findings in Dimensions of the Meal, the first book to bring an interdisciplinary perspective to meals and introduce the current publication by reviewing the key topics discussed in the following chapters. Parts two to four then consider how meals are defined, studied and taught. Major considerations include eating socially and eating alone, the influence of gender and the different situations of home, restaurant and institutional settings. Part five reviews meals worldwide with chapters on Brazilian, Indian, Chinese and Thai meals among others. The final parts discuss meals from further perspectives including those of the chef, product developer and meal setting designer. With its distinguished editor and international team of contributors, Meals in science and practice is an informative and diverse reference for both professionals and academic researchers interested in food from disciplines such as food product development, food service, nutrition, dietetics, sociology, anthropology, psychology, public health, medicine and marketing. Summarises key findings in dimensions of the meal. Considers how meals are defined, studied and taught, including eating alone and socially and the influence of gender. Reviews the meaning of meals in different cultures.

**Eating Out** Alan Warde, Lydia Martens, 2000-03-30 Eating Out first published in 2000 is a fascinating study of the consumption of food outside the home based on extensive original research carried out in England in the 1990s. Reflecting the explosion of interest in food ranging from food scares to the national obsession with celebrity chefs, the practice of eating out has increased dramatically over recent years. Through surveys and intensive interviews the authors have collected a wealth of information into people's attitudes towards and expectations of eating out as a form of entertainment and an expression of taste and status. Amongst other topics they examine social inequalities in access to eating out, social distinction interactions between customers and staff and the economic and social implications of the practice. Eating Out will be a valuable resource to academics, advanced students and practitioners in the sociology of consumption, cultural studies, social anthropology, tourism and hospitality, home economics, marketing and the general reader.

**Home Science Form 3 , Case-Based Reasoning** Janet Kolodner, 2014-06-28 Case based reasoning is one of the fastest growing areas in the field of knowledge based systems and this book, authored by a leader in the field, is the first comprehensive text on the subject. Case based reasoning systems are systems that store information about situations in their memory. As new problems arise, similar situations are searched out to help solve these problems. Problems are understood and inferences are made by finding the closest cases in memory, comparing and contrasting the problem with those cases, making

inferences based on those comparisons and asking questions when inferences can't be made. This book presents the state of the art in case based reasoning. The author synthesizes and analyzes a broad range of approaches with special emphasis on applying case based reasoning to complex real world problem solving tasks such as medical diagnosis, design conflict resolution and planning. The author's approach combines cognitive science and engineering and is based on analysis of both expert and common sense tasks. Guidelines for building case based expert systems are provided such as how to represent knowledge in cases, how to index cases for accessibility, how to implement retrieval processes for efficiency and how to adapt old solutions to fit new situations. This book is an excellent text for courses and tutorials on case based reasoning. It is also a useful resource for computer professionals and cognitive scientists interested in learning more about this fast growing field.
