**Applications** Robert J. Lopez, 2011-10-10 The Maple Summer Workshop and Symposium MSWS 94 reflects the growing community of Maple users around the world. This volume contains the contributed papers. A careful inspection of author affiliations will reveal that they come from North America, Europe, and Australia. In fact, fifteen come from the United States, two from Canada, one from Australia, and nine come from Europe. Of European papers, two are from Germany, two are from the Netherlands, two are from Spain, and one each is from Switzerland, Denmark, and the United Kingdom. More important than the geographical diversity is the intellectual range of the contributions. We begin to see in this collection of works papers in which Maple is used in an increasingly flexible way. For example, there is an application in computer science that uses Maple as a tool to create a new utility. There is an application in abstract algebra where Maple has been used to create new functionalities for computing in a rational function field. There are applications to geometrical optics, digital signal processing, and experimental design.

**Applications of Abstract Algebra with Maple and MATLAB, Second Edition**

Richard Klima, Neil P. Sigmon, Ernest Stitzinger, 2006-07-12 Eliminating the need for heavy number crunching, sophisticated mathematical software packages open the door to areas like cryptography, coding theory, and combinatorics that are dependent on abstract algebra. *Applications of Abstract Algebra with Maple and MATLAB, Second Edition* explores these topics and shows how to apply the software programs to abstract algebra and its related fields. Carefully integrating Maple™ and MATLAB, this book provides an in-depth introduction to real-world abstract algebraic problems. The first chapter offers a concise and comprehensive review of prerequisite advanced mathematics. The next several chapters examine block designs, coding theory, and cryptography, while the final chapters cover counting techniques including Pólya's and Burnside's theorems. Other topics discussed include the Rivest-Shamir and Adleman RSA cryptosystem, digital signatures, primes for security, and elliptic curve cryptosystems. New to the Second Edition: Three new chapters on Vigenère ciphers, the Advanced Encryption Standard (AES), and graph theory, as well as new MATLAB and Maple sections. Expanded exercises and additional research exercises. Maple and MATLAB files and functions available for download online and from a CD-ROM. With the incorporation of MATLAB, this second edition further illuminates the topics discussed by eliminating extensive computations of abstract algebraic techniques. The clear organization of the book, as well as the inclusion of two of the most respected mathematical software packages available, make the book a useful tool for students, mathematicians, and computer scientists.

**Differential Geometry and Its Applications** John Oprea, 2024-07-01 *Differential Geometry and Its Applications* studies the differential geometry of surfaces with the goal of helping students make the transition from the compartmentalized courses in a standard university curriculum to a type of mathematics that is a unified whole. It mixes geometry, calculus, linear algebra, differential equations, complex variables, the calculus of variations, and notions from the sciences. That mix of ideas offers students the opportunity to visualize concepts through the use of computer algebra systems such as Maple. *Differential Geometry and Its Applications* emphasizes that this visualization goes hand in hand with

understanding the mathematics behind the computer construction The book is rich in results and exercises that form a continuous spectrum from those that depend on calculation to proofs that are quite abstract

Mayr,1999-05-31 The development of powerful computer algebra systems has considerably extended the scope of problems of scientific computing which can now be solved successfully with the aid of computers However as the field of applications of computer algebra in scientific computing becomes broader and more complex there is a danger of separation between theory systems and applications For this reason we felt the need to bring together the researchers who now apply the tools of computer algebra for the solution of problems in scientific computing in order to foster new and closer interactions CASC 99 is the second conference devoted to applications of computer algebra in scientific computing The first conference in this sequence CASC 98 was held 20-24 April 1998 in St Petersburg Russia This volume contains revised versions of the papers submitted by the participants and accepted by the program committee after a thorough reviewing process The collection of papers included in the proceedings covers various topics of computer algebra methods algorithms and software applied to scientific computing symbolic numeric analysis and solving differential equations efficient computations with polynomials groups matrices and other related objects special purpose programming environments application to physics mechanics optics and
