*A History of the World in Twelve Maps* Jerry Brotton, 2012 Throughout history maps have shaped our view of the world and our place in it In this scintillating book Jerry Brotton argues that far from being purely scientific objects maps of the world are unavoidably partial and subjective intimately bound up with the systems of power authority and creativity of particular times and places Mapmakers do not simply represent the world they construct it out of the ideas of their age The book examines the significance of twelve world maps drawn from global history beginning with the mystical representations of ancient history and ending with the satellite derived imagery of today It vividly recreates the environments and circumstances in which the maps were made showing how each conveys a highly individual view of the world the Jerusalem centred Christian perspective of the fourteenth century Herefordmappamundi the earliest Korean map showing the world including Europe the first truly globalised world view of the Portuguese Diogo Ribeiro in the early sixteenth century the Peters projection of the 1970s which aimed to give equality to the third world and the earth according to Google Brotton shows how the maps both influenced and reflected contemporary events and how by reading it we can better understand the world that produced it Although the way we map our surroundings is once more changing dramatically Brotton argues that maps today are no more definitive or objective than they have ever been but that they continue to recreate and mediate our
