Mapping Hong Kong Laurent Gutierrez, Valérie Portefaix, 2000 Edited by Anna Koor Essay by Laurent Gutierrez and Valérie Portefaix Foreword by Ackbar Abbas [Arithmetic of Probability Distributions, and Characterization Problems on Abelian Groups](#) Gennadii Mikhailovich Fel'dman, 1993 This book studies the problem of the decomposition of a given random variable into a sum of independent random variables components Starting from the famous Cramer theorem which says that all components of a normal random variable are also normal random variables the central feature of the book is Feldman's use of powerful analytical techniques In the algebraic case one cannot directly use analytic methods because of the absence of a natural analytic structure on the dual group which is the domain of characteristic functions Nevertheless the methods developed in this book allow one to apply analytic techniques in the algebraic setting The first part of the book presents results on the arithmetic of probability distributions of random variables with values in a locally compact abelian group The second part studies problems of characterization of a Gaussian distribution of a locally compact abelian group by the independence or identical distribution of its linear statistics

Singularities Vladimir I. Arnold, Gert-Martin Greuel, Joseph H.M. Steenbrink, 2012-12-06 In July 1996 a conference was organized by the editors of this volume at the Mathematische Forschungsinstitut Oberwolfach to honour Egbert Brieskorn on the occasion of his 60th birthday Most of the mathematicians invited to the conference have been influenced in one way or another by Brieskorn's work in singularity theory It was the first time that so many people from the Russian school could be present at a conference in singularity theory outside Russia This volume contains papers on singularity theory and its applications written by participants of the conference In many cases they are extended versions of the talks presented there The diversity of subjects of the contributions reflects singularity theory's relevance to topology analysis and geometry combining ideas and techniques from all of these fields as well as demonstrating the breadth of Brieskorn's own interests This volume contains papers on singularity theory and its applications written by participants of the conference In many cases they are extended versions of the talks presented there The diversity of subjects of the contributions reflects singularity theory's relevance to topology analysis and geometry combining ideas and techniques from all of these fields as well as demonstrates the breadth of Brieskorn's own interests

Sbornik, 1994 **Geometry of Riemann Surfaces and Teichmüller Spaces** M. Seppälä, T. Sorvali, 2011-08-18 The moduli problem is to describe the structure of the space of isomorphism classes of Riemann surfaces of a given topological type This space is known as the moduli space and has been at the center of pure mathematics for more than a hundred years In spite of its age this field still attracts a lot of attention the smooth compact Riemann surfaces being simply complex projective algebraic curves Therefore the moduli space of compact Riemann surfaces is also the moduli space of complex algebraic curves This space lies on the intersection of many fields of mathematics and may be studied from many different points of view The aim of this monograph is to present information about the structure of the moduli space using as concrete

and elementary methods as possible. This simple approach leads to a rich theory and opens a new way of treating the moduli problem, putting new life into classical methods that were used in the study of moduli problems in the 1920s. [Explorations in Complex and Riemannian Geometry](#) John Bland, Kang-Tae Kim, Steven George Krantz, 2003. This book contains

contributions by an impressive list of leading mathematicians. The articles include high level survey and research papers exploring contemporary issues in geometric analysis, differential geometry and several complex variables. Many of the articles will provide graduate students with a good entry point into important areas of modern research. The material is intended for researchers and graduate students interested in several complex variables and complex geometry. **HK Lab** Laurent Gutierrez, Valérie Portefaix, Ezio Manzini, 2002. If many architects and urban planners envisage Hong Kong as a potential exemplar for the creation of future urban models not just in China but internationally it is because its unique geographic, economic and cultural status make it an intriguing site for experimentation. In HK Lab an array of scholars from the fields of design, visual culture, business management, architecture, urban planning, art history and semiotics focus on the singular conditions geographic, historic, political, economic, social and cultural that have produced the ever expanding network of influences of which Hong Kong is composed.

Trends in Singularities Anatoly Libgober, Mihai Tibar, 2012-12-06. The collection of papers in this volume represents recent advances in the understanding of the geometry and topology of singularities. The book covers a broad range of topics which are in the focus of contemporary singularity theory. Its idea emerged during two Singularities workshops held at the University of Lille USTL in 1999 and 2000. Due to the breadth of singularity theory a single volume can hardly give the complete picture of today's progress. Nevertheless this collection of papers provides a good snapshot of what is the state of affairs in the field at the turn of the century. Several papers deal with global aspects of singularity theory. Classification of families of plane curves with prescribed singularities were among the first problems in algebraic geometry. Classification of plane cubics was known to Newton and classification of quartics was achieved by Klein at the end of the 19th century. The problem of classification of curves of higher degrees was addressed in numerous works after that. In the paper by Artal Carmona and Cogolludo the authors describe irreducible sextic curves having a singular point of type A_n and 15 and a large Le sum of Milnor numbers of other singularities. They have discovered many interesting properties of these families. In particular they have found new examples of so called Zariski pairs i.e.

CMUC, 2017. **World Mapping Today** Robert B. Parry, C. R. Perkins, 1987. **Algebra** Vivek Sahai, Vikas Bist, 2003. This long awaited Second Edition of the highly successful textbook for undergraduate and postgraduate students covers topics such as Groups, Rings, Modules and fields. Exhibits interplay of both Group and Field Theory by means of Galois theory. Insolvability of a quintic in general by radicals is shown. New to this edition: Replaced and modified many proofs. Additional examples and exercises to make the exposition of the subject clearer and meaningful. **Arithmetic of Probability Distributions, and Characterization Problems on Abelian Groups** Gennadij M.
