Lunar Sourcebook A Users Guide To The Moon:

Lunar Sourcebook Grant Heiken, David Vaniman, Bevan M. French, 1991-04-26 The only work to date to collect data gathered during the American and Soviet missions in an accessible and complete reference of current scientific and technical information about the Moon **Lunar Sourcebook** Grant Heiken, David Vaniman, Bevan M. French, 1991 **The Moon**

David Schunk, Burton Sharpe, Bonnie L. Cooper, Madhu Thangavelu, 2007-11-27 This extraordinary book details how the Moon could be used as a springboard for Solar System exploration It presents a realistic plan for placing and servicing telescopes on the Moon and highlights the use of the Moon as a base for an early warning system from which to combat threats of near Earth objects A realistic vision of human development and settlement of the Moon over the next one hundred years is presented and the author explains how global living standards for the Earth can be enhanced through the use of lunar based generated solar power From that beginning the people of the Earth would evolve into a spacefaring civilisation

Photographic Atlas of the Moon S. M. Chong, Albert Lim, P. S. Ang, 2002-07-25 The Photographic Atlas of the Moon is a day by day photographic guide to observing the features of the Moon through a small telescope Compiled by three keen amateur astronomers each image was produced using a 40cm telescope and high resolution low speed film Whole Moon images are provided for each day of the 29 day lunar cycle with labelled features and accompanying descriptive text Selected lunar features are shown at high magnification to highlight and clearly illustrate certain regions All lunar features are labelled using current IAU terminology A comprehensive set of appendices detail the phases of the Moon give a chronology of lunar selenography and index all lunar features named in the text This atlas is an invaluable reference guide for amateurs engaging in lunar observations with a small telescope **Observing the Moon** Peter T. Wlasuk, 2013-04-17 Why write

another guide to observing the Moon That was the question I was pondering as I began this project having a fine collection of classic lunar guidebooks dating back to 1791 in my own library As a Fellow of the Royal Astronomical Society RAS member of the American Astronomical Society's Division for Planetary Sciences AAS DPS and member of the American Geophysical Union AGU I am fortunate to know many professional lunar scientists who keep me up to date with developments in lunar science contrary to public perception lunar science has definitely not stagnated since the last Apollo No 17 left the surface of the Moon in December 1972 I am also lucky to know many amateur lunar observers who like me enjoy actually looking at the Moon with telescopes and imaging it with a wide variety of devices ranging from regular 35 mm cameras to video recorders and CCD cameras My friends who study the Moon whether in their professions or just for fun gave me several reasons for doing another lunar guidebook First the last lunar observer's guide of any length was published over ten years ago and many reviewers noted that it was badly out of date even then Energy Resources for Human Settlement in the Solar System and Earth's Future in Space William A. Ambrose, James F. Reilly II, Douglas C. Peters, 2013-03-14 The book's purpose is to provide the quantitative foundation for beginning to think about developing energy and minerals outside of Earth's atmosphere that

are necessary to support scientific missions space and extra terrestrial scientific stations and permanent colonies and ultimately expand Earth's economy beyond the near earth environment to include space resources We cannot envision a situation where all resources required for future space activities are exported from Earth therefore this book clearly illustrates that an effective economy is possible beyond Earth's surface when we consider the resources available in near Earth space Our first audience is members of AAPG American Institute of Mining Metallurgical and Petroleum Engineers AIME and other professionals engaged in energy and resource development As energy professionals we are concerned on a daily basis with providing the necessary energy and minerals required for our growing world population and the increasing standard of living that comes with ample energy availability And more than anything else AAPG members are explorers We are the professionals who have pushed back the boundaries of our resource base from capturing petroleum resources from surface seeps to drilling onshore wells to extract oil and gas and to venturing offshore into increasingly difficult and hostile environments to supply the cheap and abundant energy made available by our advances in technology There are more similarities than differences between deepwater exploration and development and space exploration Beyond our own members however our audience is every rational human being who understands human health and well being quality of life education and freedom are dependent on the energy and minerals that support our advanced civilization Space is the next frontier and as the world civilization expands beyond Earth's surface we hope this publication serves to illustrate there are abundant opportunities to support and maintain and in fact allow to prosper civilization's expansion into space Publisher's website

The Lunar Base Handbook Peter Eckart, 1999 Lunar Base Handbook provides an overview about the Moon and its environment the current status of lunar base design tools we need to design a lunar base checklists and flow charts that outline the design process and technological requirements of a lunar base The main audience for this book is engineers but it is also interesting for scientists managers lawyers undergraduates and high school students and readable for the interested layman

Planetary Materials James J. Papike, 2018-12-17 Volume 36 of Reviews in Mineralogy presents a comprehensive coverage of the mineralogy and petrology of planetary materials The book is organized with an introductory chapter that introduces the reader to the nature of the planetary sample suite and provides some insights into the diverse environments from which they come Chapter 2 on Interplanetary Dust Particles IDPs and Chapter 3 on Chondritic Meteorites deal with the most primitive and unevolved materials we have to work with It is these materials that hold the clues to the nature of the solar nebula and the processes that led to the initial stages of planetary formation Chapter 4 5 and 6 consider samples from evolved asteroids the Moon and Mars respectively Chapter 7 is a brief summary chapter that compares aspects of melt derived minerals from differing planetary environments

Technologies for Prospecting, Extraction, and Utilization of Space Resources Paul Zabel, Philipp Reiss, Angel Abbud-Madrid, Beth Lomax, Florian Kehl, Valentin T. Bickel, Hendrik Kolvenbach, Philip Arm, Gabriela Ligeza, 2024-11-18 Sustainable exploration of the solar system requires a large amount of

material and propellant to be transported out of Earth's gravity well and onwards to their destination. Despite recent advances in lowering launch costs, transferring material from Earth to space is still very costly. It still amounts to several thousand to tens of thousands of Euros per kilogram to low earth orbit and transportation to the Moon and Mars, even a multiple of that. There is an abundance of resources in our solar system that can be utilized to reduce the material required to be launched from Earth significantly. Among these resources are water, ice, hydrates, metals, regolith, rare earth elements, chemical compounds, volatiles, and rare isotopes. Utilizing these space resources would enable e.g. consumable and propellant production in space, manufacturing or the construction of large structures which would otherwise be very expensive or not possible at all with material launched from Earth. Lunar regolith, for example, contains iron and titanium that could be used to produce spacecraft components or structural elements for a lunar base, while oxygen released from oxide minerals could be used for respiration or as a propellant. In addition, water ice could be extracted from regolith and used for consumption or agricultural applications. Although there have been numerous missions to the Moon, there are still a lot of unknowns concerning its surface, making it difficult to know where to look for resources and how to extract them.

Encyclopedia of Geology, 2020-12-16. Encyclopedia of Geology, Second Edition, presents in six volumes state of the art reviews on the various aspects of geologic research, all of which have moved on considerably since the writing of the first edition. New areas of discussion include extinctions, origins of life, plate tectonics and its influence on faunal provinces, new types of mineral and hydrocarbon deposits, new methods of dating rocks and geological processes. Users will find this to be a fundamental resource for teachers and students of geology as well as researchers and non-geology professionals seeking up to date reviews of geologic research. Provides a comprehensive and accessible one stop shop for information on the subject of geology, explaining methodologies and technical jargon used in the field. Highlights connections between geology and other physical and biological sciences, tackling research problems that span multiple fields. Fills a critical gap of information in a field that has seen significant progress in past years. Presents an ideal reference for a wide range of scientists in earth and environmental areas of study.

Planetary Geology, Angelo Pio Rossi, Stephan van Gasselt, 2017-11-28. This book provides an up to date interdisciplinary geoscience focused overview of solid solar system bodies and their evolution based on the comparative description of processes acting on them. Planetary research today is a strongly multidisciplinary endeavor with efforts coming from engineering and natural sciences. Key focal areas of study are the solid surfaces found in our Solar System. Some have a direct interaction with the interplanetary medium and others have dynamic atmospheres. In any of those cases, the geological records of those surfaces and sub-surfaces are key to understanding the Solar System as a whole, its evolution and the planetary perspective of our own planet. This book has a modular structure and is divided into 4 sections comprising 15 chapters in total. Each section builds upon the previous one but is also self-standing. The sections are: Methods and tools, Processes and Sources, Integration and Geological Syntheses, Frontiers. The latter covers the far-reaching broad

topics of exobiology early life extreme environments and planetary resources all areas where major advancements are expected in the forthcoming decades and both key to human exploration of the Solar System The target readership includes advanced undergraduate students in geoscience related topics with no specific planetary science knowledge undergraduates in other natural science domains e g physics astronomy biology or chemistry graduates in engineering and space systems design who want to complement their knowledge in planetary science The authors backgrounds span a broad range of topics and disciplines rooted in Earth geoscience their expertise covers remote sensing and cartography field mapping impact cratering volcanology and tectonics sedimentology and stratigraphy exobiology and life in extreme environments planetary resources and mining Several generations of planetary scientists are cooperating to provide a modern view on a discipline developed from Earth during and through Space exploration *Planetary Mineralogy* M.R. Lee ,H. Leroux,2015-04-20 This volume of the EMU Notes in Mineralogy is one of the outcomes of a school in planetary mineralogy that was held in Glasgow Scotland in 2014 The school was inspired by the recent advances in our understanding of the nature and evolution of our Solar System that have come from the missions to study and sample asteroids and comets and the very successful Mars orbiters and landers At the same time our horizons have expanded greatly with the discovery of extrasolar protoplanetary disks planets and planetary systems by space telescopes The continued success of such telescopic and robotic exploration requires a supply of highly skilled people and so one of the goals of the Glasgow school was to help build a community of early career planetary scientists and space engineers *The Moon* Michael B.
