## **Lung Development And Regeneration:**

*Lung Development and Regeneration* Donald J. Massaro, Gloria DeCarlo Massaro, Pierre Chambon, 2004-09-09 This reference compiles the most current technical and biological data available to survey the state of science in the care and management of patients with bronchopulmonary dysplasia COPD and other forms of lung disease tracking the initiation and progression of processes that cause airway obstruction the biologic and physiological abnormalities

**Stem Cells in the Lung** Ivan Bertoncello, 2015 This comprehensive overview of endogenous lung stem and progenitor cell organization and regulation in fetal lung development postnatal lung growth and adulthood deftly compiles and explores the current body of research Progressing stage by stage the chapters on fetal lung development emphasize the integrated role of epithelial stromal vascular and neural cell elements in building a functional lung while the subsequent chapters on adult lung regeneration describe the nature and properties of adult lung stem progenitor cells distributed along the proximal distal axis of the airway tree The chapters on regulation of lung regeneration and repair discuss how regenerative cells interact with their niche microenvironment and how regulation of lung regeneration and repair in the steady state and following injury recapitulates ontogeny And lastly the chapters on cellular therapies for lung disease and bioengineering the lung focus on promising emerging therapies and approaches in lung regenerative medicine The scope of this volume of the Stem Cell Biology and Regenerative Medicine series focuses on exploring the topic of building and rebuilding the lung from a cellular rather than a molecular perspective All of the contributors are working at the cutting edge of the lung stem cell field making Stem Cells in the Lung essential reading for those with an interest in the field of lung stem cell biology and the potential role of cellular therapies and tissue bioengineering approaches in lung regenerative medicine including biomedical scientists graduate students post graduate researchers and respiratory clinicians

[Lung, The: Developmental Morphogenesis, Mechanobiology, And Stem Cells](#) Ahmed El-hashash, Eiman Abdel Meguid, 2019-01-29 With detailed scientific background and up to date research this book examines recent developmental and cell biology mechanobiology and stem cell biology discoveries to help provide a better understanding of lung development repair and regeneration Lung regeneration is an urgent therapeutic priority The current major challenge is the generation of complex vascularized structures that can ultimately support or replace impaired lung function Recent discoveries in biomedical engineering are analysed within the structural context of the lung to help provide a better understanding of the innovative solutions that could be used for restoring normal morphogenesis and regeneration of the lung This also includes insights from basic developmental mechanisms of human lung development through the derivation and identification of stem cells both from the early embryo as well as from differentiated organs and tissues Suitable for a wide range of readers including physicians and surgeons scientists and researchers and undergraduate and postgraduate students this guide is an essential read for those working in the field of lung disease and development

**Class I Histone Deacetylases in Lung Development and Regeneration** Yi

Wang,2015 The generation and development of the mammalian lung requires an elegantly regulated molecular program to control cell number lineage specification as well as morphogenetic remodeling Histone deacetylases HDACs are a group of critical epigenetic factors that can mediate genome wide transcriptional repression However the functional roles of HDACs in lung development and regeneration have not been previously characterized In my dissertation I utilized a series of mouse genetic models ex vivo and in vitro assays to determine the functions of three members of class I HDAC family HDAC1 HDAC2 and HDAC3 in lung epithelial development and regeneration These studies reveal that HDAC1 and HDAC2 are redundantly required for the development and regeneration of Sox2 proximal lung endoderm progenitors via regulation of Bmp4 and cell cycle inhibitors while HDAC3 is critical for the alveolar epithelial remodeling and spreading during lung sacculation and alveologenesis These findings demonstrate strong evidence for the crucial contributions of HDACs to lung development and regeneration and provide novel insights into potential therapeutic directions for human lung diseases
