## **Machine Translation A View From The Lexicon Artificial Intelligence:**

**Machine Translation** Bonnie Jean Dorr, 1993-06 This book describes a novel cross linguistic approach to machine translation that solves certain classes of syntactic and lexical divergences by means of a lexical conceptual structure that can be composed and decomposed in language specific ways This approach allows the translator to operate uniformly across many languages while still accounting for knowledge that is specific to each language The translation model can be used to map a source language sentence to a target language sentence in a principled fashion It is built on the basis of a parametric approach making it easy to change from one language to another by setting syntactic switches for each language and providing lexical descriptions for each language without having to write a whole new processor for each language Dorr's approach advances the field of machine translation in a number of important ways it provides a uniform processor in which the same syntactic and lexical semantic processing modules are used for each language it is interlingual able to derive an underlying language independent form of the source language that allows any of the three target languages Spanish English or German to be produced from this form and it describes a systematic mapping between the lexical semantic level and the syntactic level that allows the appropriate target language words to be selected and realized despite the potential for syntactic and lexical divergences Bonnie Jean Dorr is Assistant Professor in the Computer Science Department at the University of Maryland

*Building and Using Comparable Corpora* Serge Sharoff,Reinhard Rapp,Pierre Zweigenbaum,Pascale Fung,2013-12-13 The 1990s saw a paradigm change in the use of corpus driven methods in NLP In the field of multilingual NLP such as machine translation and terminology mining this implied the use of parallel corpora However parallel resources are relatively scarce many more texts are produced daily by native speakers of any given language than translated This situation resulted in a natural drive towards the use of comparable corpora i e non parallel texts in the same domain or genre Nevertheless this research direction has not produced a single authoritative source suitable for researchers and students coming to the field The proposed volume provides a reference source identifying the state of the art in the field as well as future trends The book is intended for specialists and students in natural language processing machine translation and computer assisted translation
