Machine Learning Proceedings 1993 Lawrence A. Birnbaum, 2014-05-23 Machine Learning Proceedings 1993

Machine Learning Proceedings 1993 Lawrence Birnbaum, 2014 Machine Learning Proceedings 1993      **Machine Learning** , 1993      Program Development by Specification and Transformation Berthold Hoffmann, Bernd

Krieg-Brückner, 1993-08-30 This volume gives a coherent presentation of the outcome of the project PROSPECTRA PROgram development by SPECification and TRAnsformation that aims to provide a rigorous methodology for developing correct software and a comprehensive support system The results are substantial a theoretically well founded methodology covering the whole development cycle a very high level specification and transformation language family allowing meta program development and formalization of the development process itself and a prototype development system supporting structure editing incremental static semantic checking interactive context sensitivetransformation and verification development of transformation meta programs version management and so on with an initial library of specifications and a sizeable collection of implemented transformations The intended audience for this documentation is the academic community working in this and related areas and those members of the industrial community interested in the use of formal methods      Functional Programming, Concurrency, Simulation and Automated Reasoning Peter E. Lauer, 1993-06-16

This collection of papers arose from a series of lectures for workers in computer science and other disciplines The lectures were intended to familiarize them with some of the most exciting advanced computer based systems for the conceptualization design implementation simulation and logical analysis of applications in these disciplines The collection presents some strong motivational points for the use of theory based systems in the areas of functional programming concurrency simulation and automated reasoning highlighting some of their advantages and disadvantages relative to conventional systems The papers are mostly the work of individuals who were among the originators of the systems presented The volume is intended as a contribution to narrowing the learning gap facing conventional computer users when they wish to use advanced theory based systems The papers are meant for a wide audience and should not require great mathematical sophistication for their comprehension The papers contain numerous references for those wishing to pursue a topic in greater depth      *LOGIDATA+: Deductive Databases with Complex Objects* Paolo Atzeni, 1993-07-29

This book presents a collection of coordinated scientific papers describing the work conducted and the results achieved within the LOGIDATA project a research action funded by the Italian national research council CNR The aim of the LOGIDATA project is the definition of advanced database systems which significantly extend the functionalities of the current systems with specific reference to the application areas for which relational systems are not considered satisfactory These new systems will allow the definition of data with complex structures the representation of semantic relationships between objects and the use of powerful query and update languages They will be based on a combination of techniques originating from relational databases and logic programming with contributions from

object oriented programming The goal of the LOGIDATA project is the design definition and prototype implementation of a database management system with complex structures and a class hierarchy to be accessed through a rule based language This book presents an integrated view of the project at the end of the first phase The second phase will be mainly concerned with the implementation of prototypes *Resolution Methods for the Decision Problem* C. Fermüller, 1993-07-29 This volume contains work on the decision problem done in Kazan Russia Tallinn Estonia and Vienna Austria The authors met several times to discuss and exchange their results and finally decided to write this monograph together Besides a unified treatment of previously published results there are many new results first presented in this volume The monograph opens with an introduction and a chapter on terminology followed by chapters on Semantic clash resolution as decision procedure Completeness of ordering refinements Semantic tree based resolution variants Deciding the class K by an ordering refinement A resolution based method for building finite models A final chapter on applications completes the volume

**Ray Shooting, Depth Orders and Hidden Surface Removal** Mark de Berg, 1993-08-30 Computational geometry is the part of theoretical computer science that concerns itself with geometrical objects it aims to define efficient algorithms for problems involving points lines polygons and so on The field has gained popularity very rapidly during the last decade This is partly due to the many application areas of computational geometry and partly due to the beauty of the field itself This monograph focuses on three problems that arise in three dimensional computational geometry The first problem is the ray shooting problem preprocess a set of polyhedra into a data structure such that the first polyhedron that is hit by a query ray can be determined quickly The second problem is that of computing depth orders we want to sort a set of polyhedra such that if one polyhedron is partially obscured by another polyhedron then it comes first in the order The third problem is the hidden surface removal problem given a set of polyhedra and a view point compute which parts of the polyhedra are visible from the view point These three problems involve issues that are fundamental to three dimensional computational geometry The book also contains a large introductory part discussing the techniques used to tackle the problems This part should interest not only those who need the background for the rest of the book but also anyone who wants to know more about some recent techniques in computational geometry **Parallel Computer Architectures** Arndt Bode, Mario Dal Cin, 2013-12-11 Parallel computer architectures are now going to real applications This fact is demonstrated by the large number of application areas covered in this book see section on applications of parallel computer architectures The applications range from image analysis to quantum mechanics and data bases Still the use of parallel architectures poses serious problems and requires the development of new techniques and tools This book is a collection of best papers presented at the first workshop on two major research activities at the Universitiit Erlangen Niirnberg and Technis che Universitiit Miinchen At both universities more than 100 researchers are working in the field of multiprocessor systems and network configurations and methods and tools for parallel systems Indeed the German Science Foundation Deutsche

Forschungsgemeinschaft has been sponsoring the projects under grant numbers SFB 182 and SFB 342 Research grants in the form of a Sonder forschungsbereich are given to selected German Universities in portions of three years following a thoroughful reviewing process The overall duration of such a research grant is restricted to 12 years The initiative at Erlangen Niirnberg was started in 1987 and has been headed since this time by Prof Dr H Wedekind Work at TU Miinchen began in 1990 head of this initiative is Prof Dr A Bode The authors of this book are grateful to the Deutsche Forschungsgemeinschaft for its continuing support in the field of research on parallel processing The first section of the book is devoted to hardware aspects of parallel systems    **Artificial Social Systems** Cristiano Castelfranchi,1994-07-13 This volume contains thoroughly refereed versions of the best papers presented at the 4th European Workshop on Modelling Autonomous Agents in a Multi Agent World held July 29 31 1992 in S Martino al Cimino Italy The book opens with an introductory survey by the volume editors not only on the collection of papers but also on the history and present situation of Distributed Artificial Intelligence DAI and its interdisciplinary relations to social sciences artificial life and economics The 19 technical papers are organized into sections on artificial life and reactive systems economics and game theory coordination and multi agent planning and DAI tools and applications    *Automata, Languages and Programming* ,1993

**Foundations of Data Organization and Algorithms** ,1993    **The Logic of Information Structures** Heinrich Wansing,1993-07-29

This monograph gives a logical treatment of two central aspects of the concept of information namely information processing and information structure The structure of information is treated as a topic in model theory while information processing is seen as an aspect of proof theory A wide spectrum of substructural subsystems of intuitionistic propositional logic and of Nelson s constructive logic with strong negation is investigated In particular the problems of cut elimination functional completeness and coding of proofs with lambda terms are handled Finally an interpretation of these systems in terms of states of information and operations over these states is presented    **Topics in Case-based Reasoning** Stefan

Wess,Klaus-Dieter Althoff,Michael M. Richter,1994 This volume presents the 36 full refereed papers selected from the presentations at the First European Workshop on Case Based Reasoning held at Kaiserslautern Germany in November 1993 Case based reasoning CBR has recently attracted much interest among AI researchers it supports knowledge acquisition and problem solving and it is related to machine learning analogical reasoning cognitive modeling similarity and information retrieval EWCBR is now established as the prime European forum for CBR research This volume reflects the importance of this dynamic area of research through essential contributions to all aspects of CBR research and advanced applications

**Computer Security and Industrial Cryptography** Bart Preneel,René Govaerts,Joos Vandewalle,1993    **The MOSIX Distributed Operating System** Amnon Barak,Shai Guday,Richard G. Wheeler,1993-05-27 This book describes the design and internals of the MOSIX distributed operating system MOSIX an acronym for Multicomputer Operating System for UNIX integrates a cluster of loosely integrated computers into a virtual single machine UNIX environment The main property of

MOSIX is the high degree of integration among the processors which may include personal workstations and shared memory and non shared memory multiprocessors connected by fast communication links This integration includes network transparency cooperation between the processors to provide services across machine boundaries support of dynamic configuration and system initiated load balancing by process migration Another property of MOSIX is the ability to scale up the system configuration to encompass a large number of computers The development of MOSIX was begun in 1981 The book is intended primarily for readers who are interested in distributed and multiprocessor systems The reader is assumed to have some knowledge in programming and operating systems preferably UNIX Readers without this background will still benefit from the techniques and algorithms discussed Advances in Spatial Databases ,1993 Mathematical Foundations of Computer Science ,1993 **Machine Learning** Paul E. Utgoff,1993 **Automated Deduction, CADE ...** ,1994
