New Trends in Nonlinear Dynamics and Pattern-Forming Phenomena Pierre Coulet, Patrick Huerre, 2012-12-06 The basic aim of the NATO Advanced Research Workshop on New Trends in Nonlinear Dynamics and Pattern Forming Phenomena The Geometry of Nonequilibrium was to bring together researchers from various areas of physics to review and explore new ideas regarding the organisation of systems driven far from equilibrium Such systems are characterized by a close relationship between broken spatial and temporal symmetries The main topics of interest included pattern formation in chemical systems materials and convection traveling waves in binary fluids and liquid crystals defects and their role in the disorganization of structures spatio temporal intermittency instabilities and large scale vortices in open flows the mathematics of non equilibrium systems turbulence and last but not least growth phenomena Written contributions from participants have been grouped into chapters addressing these different areas For additional clarity the first chapter on pattern formation has been subdivided into sections One of the main concerns was to focus on the unifying features between these diverse topics The various scientific communities represented were encouraged to discuss and compare their approach so as to mutually benefit their respective fields We hope that to a large degree these goals have been met and we thank all the participants for their efforts The workshop was held in Cargèse Corsica France at the Institut d Etudes Scientifiques from August 2nd to August 12th 1988 We greatly thank Yves Pomeau and Daniel Walgraef who as members of the organising committee gave us valuable advice and encouragements

Spatial Solitons Stefano Trillo, William Torruellas, 2013-06-05 Soliton based concepts open the road for newly designed laser sources new frequency converters and high intensity laser material interactions Optical solitons as stable spatial patterns of complex nonlinear systems allow for the control of the diffraction of optical beams Solitons also prevent unwanted chaotic behavior Thus solitary wave physics plays a significant role from modern optical physics to optical communication optical switching and optical storage The book gives an updated overview of optical solitons and can serve as a reference and guide for

advanced students and scientists working in the field and related areas of science where solitons are observed

Synchronization in Oscillatory Networks Grigory V. Osipov, Jürgen Kurths, Changsong Zhou, 2007-08-10 This work systematically investigates a large number of oscillatory network configurations that are able to describe many real systems such as electric power grids lasers or even the heart muscle to name but a few The book is conceived as an introduction to the field for graduate students in physics and applied mathematics as well as being a compendium for researchers from any field of application interested in quantitative models
