Nolanbanyan Tree:

The Banyan Tree Christopher Nolan, 2000 Minnie O'Brien reflects back on her long life in rural Ireland and her struggle to hand her farm over to her youngest son

The Banyan Tree Christopher Nolan, 1999-11 On an overgrown and rundown farm in Ireland in the late 1980s widowed Minnie O'Brien a shopkeeper's daughter in the village remembers the past courtship and marriage to craftsman farmer Peter the lover of her life whom she met at a country fair their wedding and Dublin honeymoon in 1922 life on the farm the births of three children and what became of them Brendan goes off to be a missionary in Africa Sheila is a nurse at Guy's hospital Frankie seeks freedom in the Australian outback Between the turf cutting and roof laying ceilidhs and hurling matches of her early married days and the modern age of mains electricity and aeroplanes lie well worn footpaths of reminiscence down which Minnie rambles contentedly as she waits for her men to come home

The Myth of Mirror Neurons Gregory Hickok, 2014-08-11 An essential reconsideration of one of the most far reaching theories in modern neuroscience and psychology In 1992 a group of neuroscientists from Parma Italy reported a new class of brain cells discovered in the motor cortex of the macaque monkey These cells later dubbed mirror neurons responded equally well during the monkey's own motor actions such as grabbing an object and while the monkey watched someone else perform similar motor actions Researchers speculated that the neurons allowed the monkey to understand others by simulating their actions in its own brain Mirror neurons soon jumped species and took human neuroscience and psychology by storm In the late 1990s theorists showed how the cells provided an elegantly simple new way to explain the evolution of language the development of human empathy and the neural foundation of autism In the years that followed a stream of scientific studies implicated mirror neurons in everything from schizophrenia and drug abuse to sexual orientation and contagious yawning In *The Myth of Mirror Neurons* neuroscientist Gregory Hickok reexamines the mirror neuron story and finds that it is built on a tenuous foundation a pair of codependent assumptions about mirror neuron activity and human understanding Drawing on a broad range of observations from work on animal behavior modern neuroimaging neurological disorders and more Hickok argues that the foundational assumptions fall flat in light of the facts He then explores alternative explanations of mirror neuron function while illuminating crucial questions about human cognition and brain function Why do humans imitate so prodigiously How different are the left and right hemispheres of the brain Why do we have two visual systems Do we need to be able to talk to understand speech What's going wrong in autism Can humans read minds *The Myth of Mirror Neurons* not only delivers an instructive tale about the course of scientific progress from discovery to theory to revision but also provides deep insights into the organization and function of the human brain and the nature of communication and cognition
