**Non-Linear Structures** K. I. Majid, 2014-05-12 Non Linear Structures Matrix Methods of Analysis and Design by Computers presents the use of matrix methods of structural analysis suitable for computers The book consists of 10 chapters In the first chapter a brief introduction to the behavior of structures in general is given with reference to the linear elastic and simple plastic methods of structural analysis Chapter 2 is devoted to linear matrix methods both force and displacement Chapter 3 examines the stability of an individual member with various end conditions It also derives the stability functions used in Matrix force and Matrix displacement methods Chapter 4 tackles the elastic stability of complete frames Chapter 5 deals with the elastic instability of frames The sixth chapter covers the elastic plastic analysis of frames This is followed in Chapter 7 by a number of approximate methods for the evaluation of the failure load of frames without following the sequence of hinge formation The last three chapters are devoted to the design of structures and the non linear aspects of design problems A description of non linear programming by piecewise linearization is included in Chapter 10 Structural engineers architects researchers and engineering students will find the book useful

**Matrix Methods of Structural Analysis** R. K. Livesley, 2014-05-16 Matrix Methods of Structural Analysis presents how concepts and notations of matrix algebra can be applied to arriving at general systematic approach to structure analysis The book describes the use of matrix notation in structural analysis as being theoretically both compact and precise but also quite general The text also presents from the practical point of view matrix notation as providing a systematic approach to the analysis of structures related to computer programming Matrix algebraic methods are useful in repeated calculations where manual work becomes tedious The Gaus Seidel method and linear programming are two methods to use in solving simultaneous equations The book then describes the notation for loads and displacements on sign conventions stiffness and flexibility matrices and equilibrium and compatibility conditions The text discusses the formulation of the equilibrium method using connection matrices and an alternative method The book evaluates the compatibility method as programmed in a computer and it discusses the analysis of a pin jointed truss and of a rigid jointed truss The book presents some problems when using computers for analyzing structures such as decision strategy accuracy and checks conducted on handling large matrices The text also analyzes structures that behave in a non linear manner The book is suitable for structural engineers physicist civil engineers and students of architectural design
