## **Nonlinear Waves In Networks:**

Nonlinear Waves in Networks Felix Ali Mehmeti,1994-09-27 The main topic of this text is the well posedness locally in time of quasilinear wave equations on one dimensional networks with linear transmission conditions Such problems arise for example in the modelling of transversal vibrations of networks of strings The setting serves as a model case for the systematic study with T Kato s theory of the phenomenon of nonlinear compatibility conditions arising if we desire regular solutions This phenomenon is bound to occur always if we combine hyperbolic evolution with all kinds of coupling conditions We explain the connections of the results to a concept for the description of complicated interactions between media of possibly varying space dimension with time evolution previously developed by the author A strategy for physical legitimations of linear mechanical coupling models the systematic derivation of physical laws and of the asymptotics of frequencies of eigenmodes are outlined As applications of this interaction concept small vibrations of membranes with conic boundary points and a membrane string coupling are considered

*Nonlinear Waves* Emmanuel Kengne,WuMing Liu,2023-02-23 This book highlights the methods to engineer dissipative and magnetic nonlinear waves propagating in nonlinear systems In the first part of the book the authors present methodologically mathematical models of nonlinear waves propagating in one and two dimensional nonlinear transmission networks without with dissipative elements Based on these models the authors investigate the generation and the transmission of nonlinear modulated waves in general and solitary waves in particular in networks under consideration In the second part of the book the authors develop basic theoretical results for the dynamics matter wave and magnetic wave solitons of nonlinear systems and of Bose Einstein condensates trapped in external potentials combined with the time modulated nonlinearity The models treated here are based on one two and three component non autonomous Gross Pitaevskii equations Based on the Heisenberg model of spin spin interactions the authors also investigate the dynamics of magnetization in ferromagnet with or without spin transfer torque This research book is suitable for physicists mathematicians engineers and graduate students in physics mathematics and network and information engineering
