Buchler, Stephen T. Gottesman, 1990 *The Numerical Modelling of Nonlinear Stellar Pulsations* J. Robert

Buchler, 2012-12-06 This interdisciplinary meeting has brought together a group of astrophysicists with hands on experience in the numerical computation of astrophysical fluid dynamics in particular nonlinear stellar pulsations and a group of applied mathematicians who are actively engaged with the development of novel and improved numerical methods The goal of the workshop has been for the astrophysicists to discuss in detail the numerical problems encountered in the modelling of stellar pulsations and for the mathematicians to present a survey of recent developments in numerical techniques This astrophysical mathematical intercourse will help the astrophysicists in the future development of more reliable and efficient codes on the one hand and it has introduced the mathematicians to an unfamiliar area which is a tough testing ground for their techniques Since the difficulties encountered are common to other fluid dynamics problems and are in fact perhaps more severe fluid dynamicists in other research areas may find the results of this workshop of interest as well Much of our theoretical understanding of the intricate and interesting behavior of variable stars rests on our ability to perform accurate numerical hydrodynamical computations of stellar models Extensive calculations of nonlinear radial stellar pulsations with the use of increasingly powerful computers are showing more and more clearly that the numerical codes in current use have serious deficiencies *Nonlinear Dynamics and Chaos in Astrophysics* J. Kandrup, 1998 Nonlinear dynamics and chaos pervade dynamical problems on all astrophysical scales ranging from the sun and solar system to galaxies and cosmology This volume the 13th in a series devoted to problems in nonlinear astronomy and physics presents the work of 18 senior scientists from around the world as well as that of several postdoctoral associates to honour their mentor and colleague George Contopoulos a seminal figure in this area of astrophysical research Some of the topics considered are plasma physics accelerator dynamics several formal problems in nonlinear dynamics and several applied to astronomical problems on cosmology accretion phenomena and the structure and evolution of galaxies

Statistical Challenges in Modern Astronomy Eric D. Feigelson, G. Jogesh Babu, 2012-12-06 Modern astronomy has been characterized by an enormous growth in data acquisition from new technologies in telescopes detectors and computation One can now compile catalogs of tens or hundreds of millions of stars or galaxies and databases from satellite based observations are reaching terabit proportions This wealth of data gives rise to statistical challenges not previously encountered in astronomy This book is the result of a workshop held at Pennsylvania State University in August 1991 that brought together leading astronomers and statisticians to consider statistical challenges encountered in modern

astronomical research The chapters have all been thoroughly revised in the light of the discussions at the conference and some of the lively discussion is recorded here as well **Chaos and Complexity in Astrophysics** O.
