Nonlinear Evolution Equations:

Nonlinear Evolution Equations and Related Topics Wolfgang Arendt,Haim Brezis,Michel Pierre,2004-08-20 Philippe B nilan was a most original and charismatic mathematician who had a deep and decisive impact on the theory of Nonlinear Evolution Equations Dedicated to him Nonlinear Evolution Equations and Related Topics contains research papers written by highly distinguished mathematicians They are all related to Philippe Benilan s work and reflect the present state of this most active field The contributions cover a wide range of nonlinear and linear equations **Finite Difference Methods for Nonlinear Evolution Equations** Zhi-Zhong Sun,Qifeng Zhang,Guang-hua Gao,2023-05-08 Nonlinear evolution equations are widely used to describe nonlinear phenomena in natural and social sciences However they are usually quite difficult to solve in most instances This book introduces the finite difference methods for solving nonlinear evolution equations The main numerical analysis tool is the energy method This book covers the difference methods for the initial boundary value problems of twelve nonlinear partial differential equations They are Fisher equation Burgers equation regularized long wave equation Korteweg de Vries equation Camassa Holm equation Schr dinger equation Kuramoto Tsuzuki equation Zakharov equation Ginzburg Landau equation Cahn Hilliard equation epitaxial growth model and phase field crystal model This book is a monograph for the graduate students and science researchers majoring in computational mathematics and applied mathematics It will be also useful to all researchers in related disciplines **Nonlinear Evolution Equations - Global Behavior of Solutions** Alain Haraux,2006-11-15 Nonlinear Evolution Equations And Painleve Test N Euler,Willi-hans Steeb,1988-10-01 This book is an edited version of lectures given by the authors at a seminar at the Rand Afrikaans University It gives a survey on the Painlev test Painlev property and integrability Both ordinary differential equations and partial differential equations are considered *Lectures on Nonlinear Evolution Equations* Reinhard Racke,2013-06-29 The book in hand is based on lectures which were given at the University of Bonn in the winter semesters of 1989 90 and 1990 91 The aim of the lectures was to present an elementary self contained introduction into some important aspects of the theory of global small smooth solutions to initial value problems for non linear evolution equa tions The addressed audience included graduate students of both mathematics and physics who were only assumed to have abasie knowledge of linear partial differential equations Thus in the spirit of the underlying series this book is intended to serve as a detailed basis for lectures on the subject as weIl as for self studies for students or for other newcomers to this field The presentation of the theory is made using the classical method of continuation of local solutions with the help of apriori estimates obtained for small data The corre sponding global existence theorems have been proved mainly in the last decade focussing on fully nonlinear systems Related questions concerning large data problems the ex istence of weak solutions or the analysis of hock waves are not discussed Also the question of optimal regularity assumptions on the coefficients is beyond the scope of the book and is touched only in part and exemplarily **Nonlinear Evolution Equations and Dynamical Systems** Sandra Carillo,Orlando

Ragnisco,2012-12-06 Nonlinear Evolution Equations and Dynamical Systems NEEDS provides a presentation of the state of the art Except for a few review papers the 40 contributions are intentially brief to give only the gist of the methods proofs etc including references to the relevant litera ture This gives a handy overview of current research activities Hence the book should be equally useful to the senior resercher as well as the colleague just entering the field Keypoints treated are i integrable systems in multidimensions and associated phenomenology dromions ii criteria and tests of integrability e g Painlev test iii new developments related to the scattering transform iv algebraic approaches to integrable systems and Hamiltonian theory e g connections with Young Baxter equations and Kac Moody algebras v new developments in mappings and cellular automata vi applications to general relativity condensed matter physics and oceanography **Advances in Nonlinear Evolution Equations** Mohamed Jleli,Bessem Samet,Calogero Vetro,2025-10-03 This book presents a collection of significant and original contributions that delve into the realm of nonlinear evolution equations and their applications encompassing both theory and practical usage Serving as a dynamic platform for interdisciplinary collaboration it facilitates the exchange of innovative ideas among scientists from diverse fields who share a keen interest in the intricate world of evolution equations The book bridges the gap between theory and practicality offering valuable insights for researchers and enthusiasts alike transcending disciplinary boundaries Evolution equations a subset of partial differential equations serve as mathematical tools to depict the temporal transformation of physical systems from their initial states These equations find widespread utility in modeling various real world phenomena across diverse disciplines Notable examples of nonlinear evolution equations include the heat equation which characterizes the evolution of heat distribution over time the nonlinear Schr dinger equation instrumental in understanding data transmission in fiber optic communication systems the Korteweg de Vries equation illuminating the dynamics of surface water waves and the portrayal of ion acoustic waves in cold plasma *Nonlinear Evolution Equations and Potential Theory* J.
